(UTC) 1cd6b6c912 I went to a website that immediately started loading all kinds of programs onto my PC. I've managed to turn off all of the junk that it was running, and I've run all kinds of spybot removers, and I downloaded HijackThis, and I was able to get rid of something called "Intelligent Explorer", which installed an extra toolbar on my PC. But Intelligent Explorer keeps

reinstalling itself, and I keep getting popup windows from something that must have embedded itself into my registry. I see lots of things when HijackThis runs that it questions, but I'm afraid to delete any of that stuff. I keep using it to delete Intelligent Explorer, but it won't stay away.
