Bullet 29 January 2017. com. Archived from the original on 23 September 2015 A bullet is a kinetic projectile, a component of firearm ammunition that is shot from a gun barrel. Bullets are often tapered, making them more aerodynamic. They are made of a variety of materials, such as copper, lead, steel, polymer, rubber and even wax; and are made in various shapes and constructions (depending on the intended applications), including specialized functions such as hunting, target shooting, training, and combat. Bullet size is expressed by weight and diameter (referred to as "caliber") in both imperial and metric measurement systems. Bilby, Joe (1999). Bullets do not normally contain explosives but strike or damage the intended target by transferring kinetic energy upon impact and penetration. civilwarguns.
