driving opportunities. In contrast to SDM, the traditional biomedical care system placed physicians in a position of authority with patients playing a passive role in care. Physicians instructed patients about what to do, and patients rarely took part in the treatment decision.

Examples they give include their own finding at an insurance company that the median premiums set by underwriters independently for the same five fictive customers varied by 55%, five times as much as expected by most underwriters and their executives. Another example is that two psychiatrists who independently diagnosed 426 state hospital patients agreed on which mental illness the patient...

Decision analysis Hammond, J. ISBN 0-585-31075-0 Decision analysis (DA) is

the discipline comprising the philosophy, methodology, and professional practice necessary to address important decisions in a formal manner. & Raiffa, H. L. (1999). Decision analysis includes many procedures, methods, and tools for identifying, clearly representing, and formally assessing important aspects of a decision; for prescribing a recommended course of action by applying the maximum expected-utility axiom to a well-formed representation of the decision; and for translating the formal representation of a decision and its corresponding recommendation into insight for the decision maker, and other corporate and non-corporate stakeholders. Shared decision-making in medicine Shared decision-making in medicine (SDM) is a process in which both the patient and physician contribute to the medical decision-making process and agree Shared decision-making in medicine (SDM) is a process in which both the patient and physician contribute to the medical decision-making process and agree on treatment decisions. Health care providers explain treatments and alternatives to patients and help them choose the treatment option that best aligns with their

preferences as well as their unique cultural and personal beliefs 027bd1b4f0

Ecological rationality Ecological rationality, in contrast, claims that the rationality of a decision depends on the circumstances in which it takes place, so as to achieve one's goals in this particular context. The presently dominant account of practical rationality in the social and behavioral sciences such as economics and psychology, rational choice theory, maintains that practical rationality consists in making decisions in accordance with some fixed rules, irrespective of context. Overall, rationality is a particular account of practical rationality, which in turn specifies the norms of rational action – what one ought to do in order to act rationally Ecological rationality is a particular account of practical rationality, which in turn specifies the norms of rational action – what one ought to do in order to act rationally. What is considered rational under the rational choice account thus might not always be considered rational under the ecological rationality account 027bd1b4f0

Consensus decision-making Consensus decision-making in a democracy is consensus democracy. Consensus decision-making is a group decision-making

process in which participants work together to develop proposals for actions that achieve a broad acceptance Consensus decision-making is a group decision-making process in which participants work together to develop proposals for actions that achieve a broad acceptance. Consensus is reached when everyone in the group assents to a decision (or almost everyone; see stand aside) even if some do not fully agree to or support all aspects of it. It differs from simple unanimity, which requires all participants to support a decision 027bd1b4f0
