Uninterruptible power supply A UPS differs from a traditional auxiliary/emergency power system or standby generator in that it will provide near-instantaneous protection from input power interruptions by switching to energy stored in battery packs, supercapacitors or flywheels. Almost all UPSs also contain integrated surge protection to shield the output appliances from voltage spikes. parallel strings. The on-battery run-times of most UPSs are relatively short (only a few minutes) but sufficient to "buy time" for initiating a standby power source or properly shutting down the protected equipment. IEC 62040-1:2017

Uninterruptible power systems (UPS) - Part 1: General and safety requirements for UPS IEC 62040-2:2016 Uninterruptible An uninterruptible power supply (UPS) or uninterruptible power source is a type of continual power system that provides automated backup electric power to a load when the input power source or mains power fails 06833574a9

A UPS is typically used to protect... 06833574a9
