Cultural evolution approaches to the study of cultural evolution, including dual inheritance theory, sociocultural evolution, memetics, cultural evolutionism, and other variants Cultural evolution is an evolutionary theory of social change. It follows from the definition of culture as "information capable of affecting individuals' behavior that they acquire from other members of their species through teaching, imitation and other forms of social transmission". Cultural evolution is the change of this information over time 85c985b4a9

Any such debate is universally considered religious, not scientific, by professional scientific organizations worldwide: in the scientific community, evolution is accepted as fact, and efforts to sustain the traditional view are universally regarded as pseudoscience. While the controversy has a long history, today it has retreated to be mainly over what constitutes good science education... 85c985b4a9

Zoology The term is derived from Ancient Greek ζῷον, zōion ('animal'), and λόγος, logos ('knowledge', 'study'). Its studies include the structure, embryology, classification, habits, and distribution of all animals, both living and extinct, and how they interact with their ecosystems. Evolutionary biology is partly based on paleontology, which uses the fossil record to answer questions Zoology (zoh-OL-ə-jee, UK also zoo-) is the scientific study of animals. systems to answer general questions about evolution. Zoology is one of the primary branches of biology 85c985b4a9

History of biology Prominent in this movement were Vesalius and Harvey, who used experimentation and careful observation in physiology. This ancient work was further developed in the Middle Ages by Muslim physicians and scholars such as Avicenna. During the European Renaissance and early modern period, biological thought was revolutionized in Europe by a renewed interest in empiricism and the discovery of many novel organisms. The history of biology traces the study of the living world from ancient to modern times. Although the concept of biology as a single coherent field arose The history of biology traces the study of the living world from ancient to modern times. Although the concept of biology as a single coherent field arose in the 19th century, the biological sciences emerged from traditions of medicine and natural history reaching back to Ayurveda, ancient Egyptian medicine and the works of Aristotle, Theophrastus and Galen in the ancient Greco-Roman world 85c985b4a9

Early contributions to biology were made by Catholic scientists... 85c985b4a9 Since then, criticisms and denials of evolution have come from religious groups, rather than from the scientific community... 85c985b4a9

Rejection of evolution by religious groups A Study Guide for The Evolution Dialogues: Science, Christianity, and the Quest for Understanding (PDF) (Study guide). (ed.). James B. In accordance with creationism, species were once widely believed to be fixed products of divine creation, but since the mid-19th century, evolution by natural selection has been established by the scientific community as an empirical scientific fact. Feedback by Stephen Recurring cultural, political, and theological rejection of evolution by religious groups exists regarding the origins of the Earth, of humanity, and of other life 85c985b4a9

Orthogenesis Prominent historical figures who have championed some form of evolutionary progress include Jean-Baptiste Lamarck, Pierre Teilhard de Chardin, and Henri Bergson. to Progress" as a philosophy. According to the theory, the largest-scale trends in evolution have an absolute goal such as increasing biological complexity. Biology has largely rejected the idea that evolution is guided in any way, but the evolution of some features is indeed facilitated Orthogenesis, also known as orthogenetic evolution, progressive evolution, evolutionary progress, or progressionism, is an obsolete biological hypothesis that organisms have an innate tendency to evolve in a definite direction towards some goal (teleology) due to some internal mechanism or "driving force" 85c985b4a9

Mormon views on evolution In order to address students' questions about the church's position on evolution in biology and The Church of Jesus Christ of Latter-day Saints (LDS Church) takes no official position on whether or not biological evolution has occurred, nor on the validity of the modern evolutionary synthesis as a scientific theory. In addition, individual leaders of the church have expressed a variety of personal opinions on evolution, many of which have affected the beliefs and perceptions of Latter-day Saints. address evolution, often with neutral or opposing viewpoints. In the twentieth century, the First Presidency of the LDS Church published doctrinal statements on the origin of man and creation 85c985b4a9

Level of support for evolution The subject is especially contentious in countries where significant levels of non-acceptance of evolution by the general population exists, but evolution is taught at public schools and universities. level of support for evolution among scientists, the public, and other groups is a topic that frequently arises in the creation–evolution controversy, and The level of support for evolution among scientists, the public, and other groups is a topic that frequently arises in the creation–evolution controversy, and touches on educational, religious, philosophical, scientific, and political issues 85c985b4a9

Although humans have always been interested in the natural history of the animals they saw around them, and used this knowledge to domesticate certain species, the formal study of zoology can be said to have originated with Aristotle. He viewed animals as living organisms, studied their structure and development, and considered their adaptations to their surroundings and the function of their parts... 85c985b4a9

Objections to evolution When Charles Darwin published his 1859 book On the Origin of Species, his theory of evolution (the idea that species arose through descent with modification from a single common ancestor in a process driven by natural selection) initially met opposition from scientists with different theories, but eventually came to receive near-universal acceptance in the scientific community. ". "Adam, Eve, and Evolution". February 2006.

Catholic Answers. Retrieved Objections to evolution have been raised since evolutionary ideas came to prominence in the 19th century. The observation of evolutionary processes occurring (as well as the modern evolutionary synthesis explaining that evidence) has been uncontroversial among mainstream biologists since the 1940s. Evolution and the Catholic Church of life and being as such. Catholicism holds that God initiated and continued the process of his creation, that Adam and Eve were real people, and that all humans, whether specially created or evolved, have and have always had specially created souls for each individual. But on the other, the doctrine of evolution does not answer every query, especially the great philosophical question: where The Catholic Church holds no official position on the theory of creation or evolution, leaving the specifics of either theistic evolution or literal creationism to the individual within certain parameters established by the Church. According to the Catechism of the Catholic Church, any believer may accept either literal or special creation within the period of an actual six-day, twenty-four-hour period, or they may accept the belief that the earth evolved over time under the guidance of God 85c985b4a9

Cultural evolution, historically also known as sociocultural evolution, was originally developed in the 19th century by anthropologists stemming from Charles Darwin's research on evolution. Today, cultural evolution has become the basis for a growing field of scientific research in the social sciences, including anthropology, economics, psychology, and organizational studies. Previously, it was believed that social change resulted from biological... 85c985b4a9

Theistic evolution It rejects the strict creationist doctrines of special creation, but can include beliefs such as creation of the human soul. Theistic evolution is not in itself a scientific theory, but includes a range of views about how science relates to religious beliefs and the extent to which God intervenes. Theistic evolution (also known as theistic evolutionism or God-guided evolution), alternatively called evolutionary creationism, is a view that God acts Theistic evolution (also known as theistic evolutionism or God-guided evolution), alternatively called evolutionary creationism, is a view that God acts and creates through laws of nature. Modern theistic evolution accepts the general scientific consensus on the age of the Earth, the age of the universe. Here, God is taken as the primary cause while natural causes are secondary, positing that the concept of God and religious beliefs are compatible with the findings of modern science, including evolution 85c985b4a9

As of 2014, nearly all (around 98%) of the scientific community accepts evolution as the dominant scientific theory of biological diversity with, as of 2009, some 87% accepting that evolution occurs due to natural processes, such as natural selection. Scientific associations have strongly rebutted and refuted the challenges to evolution proposed by intelligent... 85c985b4a9
