MLIR (software) It provides a modular and extensible intermediate representation (IR) framework intended to facilitate the construction of domain-specific compilers and improve compilation for heterogeneous computing platforms. MLIR (Multi-Level Intermediate Representation) is an open-source compiler infrastructure project developed as a sub-project of

the LLVM project. MLIR supports multiple abstraction levels in a single IR and introduces dialects, a mechanism for defining custom operations, types, and attributes tailored to specific domains. The name "Multi-Level Intermediate Representation" reflects the system's ability to model computations at various abstraction levels and progressively lower them toward machine code.
