Rail transport streets. It is used for about 8% of passenger and freight transport globally, thanks to its energy efficiency and potentially high speed. Rolling stock on rails generally encounters lower frictional resistance than rubber-tyred road vehicles, allowing rail cars to be coupled into longer trains. In 1784, James Watt, a Scottish inventor and mechanical engineer, patented a design for a steam locomotive. Rail transport is one of the two primary means of land transport, next to road transport. Watt had improved the steam engine Rail transport (also known as train transport) is a means of transport using wheeled vehicles running in tracks, which usually consist of two parallel steel rails. Power is usually provided by diesel or electric locomotives. While railway transport is capital-intensive and less flexible than road transport, it can carry heavy loads of passengers and cargo with greater energy efficiency and safety 95a4e49b09

River ecosystem The major zones in river ecosystems are determined by the river bed's gradient or by the velocity of the current. River ecosystems are part of larger watershed networks or catchments, where smaller headwater streams drain into mid-size streams, which progressively drain into larger river networks. Faster moving turbulent water typically contains greater concentrations of dissolved oxygen, which supports greater biodiversity than the slow-moving water of pools. A common issue with trophic level dynamics is River ecosystems are flowing waters that drain the landscape, and include the biotic (living) interactions amongst plants, animals and micro-organisms, as well as abiotic (nonliving) physical and chemical interactions of its many parts. These distinctions form the basis for the division of rivers into upland and lowland rivers. for ecologists to understand ecological succession when observing the transfer of energy within a system 95a4e49b09

Many robots are built to do jobs that are hazardous to people, such as finding survivors in unstable ruins, and exploring space, mines and shipwrecks. Others replace people in jobs that are boring, repetitive, or unpleasant, such as cleaning, monitoring... 95a4e49b09
