Educational technology In EdTech Inc. When referred to with its abbreviation, "EdTech", it often refers to the industry of companies that create educational technology. microcontrollers such as Raspberry Pi, Arduino and BeagleBone are easy to program, some can run Linux and connect to devices such as sensors, displays, LEDs Educational technology (commonly abbreviated as edutech, or edtech) is the combined use of computer hardware, software, and educational theory and practice to facilitate learning and teaching. Many of. : Selling, Automating and Globalizing Higher Education in the Digital Age, Tanner Mirrlees and Shahid Alvi (2019) argue "EdTech is no exception to industry ownership and market rules" and "define the EdTech industries as all the privately owned companies currently involved in the financing, production and distribution of commercial hardware, software, cultural goods, services and platforms for the educational market with the goal of turning a profit aefaf51a6a

BASIC interpreter Edwards released Arduino BASIC for the Arduino, and now a widely forked A BASIC interpreter is an interpreter that enables users to enter and run programs in the BASIC language and was, for the first part of the microcomputer era, the default application that computers would launch. In 2014, Robin H. Users were expected to use the BASIC interpreter to type in programs or to load programs from storage (initially cassette tapes then floppy disks). (SBO), allowing students to run programs from a web browser aefaf51a6a

< 20 October a6a BASIC interpreters are of historical importance. Microsoft's first product for sale was a BASIC interpreter (Altair BASIC), which paved the way for the company's success. Before Altair BASIC, microcomputers were sold as kits that needed to be programmed in machine code (for instance, the Apple I). During the Altair period, BASIC interpreters were sold separately, becoming the first software sold to individuals rather than to organizations...

Internet of things The IoT encompasses electronics, communication, and computer science engineering. Because IoT projects have longer project timelines, a lack of skilled resources and several Internet of things (IoT) describes devices with sensors, processing ability, software and other technologies that connect and exchange data with other devices and systems over the Internet or other communication networks. "Internet of things" has been considered a misnomer because devices do not need to be connected to the public internet; they only need to be connected to a network and be individually addressable. and traditional IT, manufacturing or construction projects a6a

Feedback on proposals on WMF communication and experimentation
On 28 July 2004, GGSL, an Albanian team of Linux users, was one of the first public organizations for getting information about open source, This conference was called "Software Freedom Day". which is known as the first FOSS initiative in Kosovo. The conference was held to promote the free and open software (FOSS) movement. Some of the issues that were discussed were the Linux operating system and the definitions of free software and open sources in general. KDE and GNOME desktop environments (DEs) were also discussed in conference. Centralized discussion

Flood geology Others including Giovanni Arduino attributed secondary Flood geology (also creation geology or diluvial geology) is a pseudoscientific attempt to interpret and reconcile geological features of the Earth in accordance with a literal belief in the Genesis flood narrative, the flood myth in the Hebrew Bible. he attributed to the action of the Genesis deluge, possibly including debris from the older mountains. In the early 19th century, diluvial geologists hypothesized that specific surface features provided evidence of a worldwide flood which had followed earlier geological eras; after further investigation they agreed that these features resulted from local floods or from glaciers. In the 20th century, young-Earth creationists revived flood geology as an overarching concept in their opposition to evolution, assuming a recent six-day Creation and cataclysmic geological changes during the biblical flood, and incorporating creationist explanations of

Home Assistant earned is used to finance the project's infrastructure and to pay for full-time employees contributing to the Home Assistant and ESPHome projects. The software emphasizes local control and privacy and is designed to be independent of any specific Internet of Things (IoT) ecosystem without having to rely on cloud services. In January Home Assistant is free and open-source software used to enable centralized home automation. Its customizable user interface can be accessed through any web-browser or by using its mobile apps for Android and iOS, as well as different options to also use voice commands via a supported virtual assistant. It is a smart home controller that serves both as a smart home hub (sometimes

called a "smart gateway") and an integration platform designed for interoperability, allowing users to have a single point of control and enable automating different smart home devices from a central location regardless of manufacturer or brand aefaf51a6a
