Cantor's first set theory article In 1879, he modified his uncountability proof by using the topological notion of a set being. This theorem is proved using Cantor's first uncountability proof, which differs from the more familiar proof using his diagonal argument. The title of the article, "On a Property of the Collection of All Real Algebraic Numbers" ("Ueber eine Eigenschaft des Inbegriffes aller reellen algebraischen Zahlen"), refers to its first theorem: the set of real algebraic numbers is countable. Cantor's article was published in 1874. edition), Garrett Birkhoff and Saunders Mac Lane's A Survey of Modern Algebra (1941; 1997 5th edition), and Michael Spivak's Calculus (1967; 2008 4th Cantor's first set theory article contains Georg Cantor's first theorems of transfinite set theory, which studies infinite sets and their properties. One of these theorems is his "revolutionary discovery" that the set of all real numbers is uncountably, rather than countably, infinite 5be0f19af7

Alternating series test The test is only sufficient, not necessary, so some convergent alternating series may fail the first part of the test. The test was devised by Gottfried Leibniz and is sometimes known as Leibniz's test, Leibniz's rule, or the Leibniz criterion.). Spivak, Michael (2008) [1967]. ISBN 0-07-054235-X. York: McGraw-Hill. OCLC 1502474. ISBN 978-0-914098-91-1 In mathematical analysis, the alternating series test proves that an alternating series is convergent when its terms decrease monotonically in absolute value and approach zero in the limit. History of mathematics From 3000 BC the Mesopotamian states of Sumer, Akkad and Assyria, followed closely by Ancient Egypt and the Levantine state of Ebla began using arithmetic, algebra and geometry for taxation, commerce, trade, and in astronomy, to record time and formulate calendars. American Mathematical Society. 2) The history of mathematics deals with the origin of discoveries in mathematics and the mathematical methods and notation of the past. Dirichlet's test , Advanced Calculus: An In mathematics, Dirichlet's test is a method of testing for the convergence of a series that is especially useful for proving conditional convergence. Calculus (4th ed. Voxman, William L. Spivak, Michael (2008) [1967]. Houston, TX: Publish or Perish. OCLC 1502474.). ISBN 978-0-914098-91-1. It is named after its author Peter Gustav Lejeune Dirichlet, and was published posthumously in the Journal de Mathématiques Pures et Appliquées in 1862 5be0f19af7

Spivak, Michael (2008). sum for all convergent series Apostol 1967, p. 483–486 In mathematics, the Riemann series theorem, also called the Riemann rearrangement theorem, named after 19th-century German mathematician Bernhard Riemann, says that if an infinite series of real numbers is conditionally convergent, then its terms can be arranged in a permutation so that the new series converges to an arbitrary real number, and rearranged such that the new series diverges.)

Michael Spivak Spivak was the author of the five-volume A Comprehensive Introduction to Differential Geometry, which won the Leroy P. Steele Prize for expository writing in 1985. Afterwards, Spivak taught as a full-time Math Lecturer at Brandeis University, whilst writing Calculus on Manifolds: A Modern Approach Michael David Spivak (May 25, 1940 – October 1, 2020) was an American mathematician specializing in differential geometry, an expositor of mathematics, and the founder of Publish-or-Perish Press. Poincaré Duality

Originally called infinitesimal calculus or "the calculus of infinitesimals", it has two major branches, differential calculus and integral calculus. The former concerns instantaneous rates of change, and the slopes of curves, while the latter concerns accumulation of quantities, and areas under or between curves. These two branches are related to each other by the fundamental theorem of calculus. They make use of the fundamental notions of convergence of infinite sequences and infinite series to a well-defined limit. It is the "mathematical backbone" for dealing with problems where variables change with time or another...
