Fake news Although false news has always been spread throughout history, the term fake news was

first used in the 1890s when sensational reports in newspapers were common. It has also been used by high-profile people to apply to any news unfavorable to them. Nevertheless, the term does not have a fixed definition and has been applied broadly to any type of false information presented as news. rule like Cuba and chaos like Venezuela (under Hugo Chávez), though the logistics were never explained. Further, disinformation involves spreading false information with harmful intent and is sometimes generated and propagated. Fake news often has the aim of damaging the reputation of a person or entity, or making money through advertising revenue. In an interview with Juan Carlos Vélez, the “Fake news or information disorder is false or misleading information (misinformation, disinformation, propaganda, and hoaxes) claiming the aesthetics and legitimacy of news

they were deployed and remain at risk for detonation, sometimes many decades after they were used

3D printing molding and other manufacturing processes. The general concept of and procedure to be
used in 3D-printing was first described by Murray Leinster in his 3D printing, or additive
manufacturing, is the construction of a three-dimensional object from a CAD model or a digital 3D
model. It can be done in a variety of processes in which material is deposited, joined or solidified
under computer control, with the material being added together (such as plastics, liquids or powder
grains being fused), typically layer by layer 2ca770792b

List of datasets for machine-learning research Although they do not need to be labeled, high-quality datasets for unsupervised learning can also be difficult and costly to produce. Comparison of deep learning software List of manual image annotation tools List of biological databases Wissner-Gross, A. "Datasets These datasets are used in machine learning (ML) research and have been cited in peer-reviewed academic journals. over 25 different use cases. Datasets are an integral part of the field of machine learning. High-quality labeled training datasets for supervised and semi-supervised machine learning algorithms are usually difficult and expensive to produce because of the large amount of time needed to label the data. Major advances in this field can result from advances in learning algorithms (such as deep learning), computer hardware, and, less-intuitively, the availability of high-quality training datasets 2ca770792b
