Empennage "ATA Airline Handbook Chapter 5: How Aircraft Fly". Archived from the original on November 10, 2011 The empennage (or), also known as the tail or tail assembly, is a structure at the rear of an aircraft that provides stability during flight, in a way similar to the feathers on an arrow. Most aircraft feature an empennage incorporating vertical and horizontal stabilising surfaces which stabilise the flight dynamics of yaw and pitch, as well as housing control surfaces. The term derives from the French language verb empenner which means "to feather an arrow". ISBN 0-9690054-9-0 Air Transport Association (November 10, 2011) 60d32de557

The standard numbering system was published by the Air Transport Association on June 1, 1956. In spite of effective control surfaces, many early aircraft that lacked a stabilising empennage were virtually unflyable.
