Norepinephrine ISBN 978-0-7020-8060-9 Norepinephrine (NE), also called noradrenaline (NA) or noradrenalin, is an organic chemical in the catecholamine family that functions in the brain and body as a hormone, neurotransmitter and neuromodulator. Rang and Dale's pharmacology (Ninth ed. The name "norepinephrine" (from Ancient Greek ἐπί (epí), "upon", and νεφρός (nephρός), "kidney") is usually preferred in the United States, whereas "noradrenaline" (from Latin ad, "near", and ren, "kidney") is more commonly used in the United Kingdom and the rest of the world. "Norepinephrine" is also the international nonproprietary name given to the drug. Regardless of which name is used for the substance itself, parts of the body that produce or are affected by it are referred to as noradrenergic. Edinburgh: Elsevier.). Ritter J, Flower RJ, Henderson G, Loke YK, MacEwan DJ, Rang HP (2020) 14823f5230

Hemoglobin M. ; Dale M. P. Elsevier. Hemoglobin in the blood carries oxygen from the respiratory organs (lungs or gills) to the other tissues of the body, where it releases the oxygen to enable aerobic respiration which powers an animal's metabolism. A healthy human has 12 to 20 grams of hemoglobin in every 100 mL of blood. ISBN 978-0-443-07202-4 Hemoglobin (haemoglobin, Hb or Hgb) is a protein containing iron that facilitates the transportation of oxygen in red blood cells. 001113. Almost all vertebrates contain hemoglobin, with the sole exception of the fish family Channichthyidae. ; Moore P. Hemoglobin is a metalloprotein, a chromoprotein, and a globulin. M. (2003). ph. Pharmacology, Fifth Edition. 50. K. Rang, H. 030188. ; Ritter J. PMID 3288089 14823f5230

Heroin Rang HP, Ritter JM, Flower RJ, Henderson G (2011).). Black tar heroin is a variable admixture of morphine derivatives—predominantly 6-MAM (6-monoacetylmorphine), which is the result of crude acetylation during clandestine production of street heroin. Heroin is used medically in several countries to relieve pain, such as during childbirth or a heart attack, as well as in opioid replacement therapy. Medical-grade diamorphine is used as a pure hydrochloride salt. Various white and brown powders sold illegally around the world as heroin are routinely diluted with cutting agents. this drug is widely known as heroin. Rang & Dale's pharmacology (7th ed. Edinburgh, UK: Churchill Livingstone Heroin, also known as diacetylmorphine and diamorphine among other names, is a morphinan opioid substance synthesized from the dried latex of the opium poppy; it is mainly used as a recreational drug for its euphoric effects 14823f5230

Depolarization P. ISBN 978-0-443-07145-4. (2003). anatomy & physiology. Depolarization is essential to the function of many cells, communication between cells, and the overall physiology of an organism. In biology, depolarization or hypopolarization is a change within a cell, during which the cell undergoes a shift in electric charge distribution, resulting in less negative charge inside the cell compared to the outside. Rang, H. San Francisco, CA: Pearson Education Inc. Edinburgh: Churchill Livingstone. Pharmacology 14823f5230

This difference in charge is called the cell's membrane potential. In the process of depolarization, the negative internal charge of the cell temporarily becomes more positive (less negative). This shift from a negative to a more positive membrane potential occurs during several processes, including an action potential.
