Maritime history Nautical history records and interprets past events involving ships, shipping, navigation, and seafarers. As an academic subject, it often crosses the boundaries of standard disciplines, focusing on understanding humankind's various relationships to the oceans, seas, and major waterways of the globe. It covers a broad thematic element of history that often uses a global approach, although national and regional histories remain predominant. the history of ships, ship design, shipbuilding, the history of navigation, the history of the various maritime-related sciences (oceanography, cartography Maritime history is the study of human interaction with and activity at sea ff2f375491

Mathematics Similarly, meteorology, oceanography, and planetology also use mathematics due to their heavy use of models. risk of natural catastrophes. Areas of mathematics Mathematics is a field of study that discovers and organizes methods, theories and theorems that are developed and proved for the needs of empirical sciences and mathematics itself. There are many areas of mathematics, which include number theory (the study of numbers), algebra (the study of formulas and related structures), geometry (the study of shapes and spaces that contain them), analysis (the study of continuous changes), and set theory (presently used as a foundation for all mathematics) ff2f375491
