The concept of inventory, stock or work in process (or work in progress) has been extended from manufacturing systems to service businesses and projects, by generalizing the definition to be "all work within the process of production—all work that is or has occurred prior to the completion of production". In the context of a manufacturing production system, inventory refers to all work that has occurred—raw materials, partially finished products, finished products prior to sale and departure from the manufacturing system. In the context of services, inventory refers to all work done prior to sale, including partially process information. 74c49b5b22

Manufacturing These materials are then modified through manufacturing to become the Manufacturing is the creation or production of goods with the help of equipment, labor, machines, tools, and chemical or biological processing or formulation. The term may refer to a range of human activity, from handicraft to high-tech, but it is most commonly applied to industrial design, in which raw materials from the primary sector are transformed into finished goods on a large scale. It is the essence of the secondary sector of the economy. Such goods may be sold to other manufacturers for the production of other more complex products (such as aircraft, household appliances, furniture, sports equipment or automobiles), or distributed via the tertiary sector to end users and consumers (usually through wholesalers, who in turn sell to retailers, who then sell them to individual customers). The manufacturing process begins with product design, and materials specification 74c49b5b22

Military logistics is concerned with maintaining army supply lines with food, armaments, ammunition, and spare parts, apart from the transportation of troops themselves. Civil logistics deals with acquiring, moving, and storing raw materials, semi-finished goods, and finished goods. For organisations that provide garbage collection, mail deliveries, public utilities, and after-sales services, logistical problems must be addressed. 74c49b5b22 The Liberty ship was effectively superseded by the Victory ship, a somewhat larger, materially faster, more modern-powered vessel of generally similar design. This is sometimes marked as the beginning of the war. From 1931 to 1937, China and Japan engaged in skirmishes, including in Shanghai and in Northern China. Nationalist and Chinese Communist Party (CCP) forces, respectively led by Chiang Kai-shek and Mao Zedong, had fought each other in the Chinese Civil War since 1927. Inventory management is a discipline primarily about specifying the shape and placement of stocked goods. It is required at different locations within a facility or within many locations of a supply network to precede the regular and planned course of production and stock of materials. 74c49b5b22 The class was developed to meet British orders for transports to replace ships that had been lost. Eighteen American shipyards built 2,710 Liberty ships between 1941 and 1945 (an average of three ships every two days), easily the largest number of ships ever produced to a single design. 74c49b5b22 Star Fleet Battles is a ship-to-ship warfare simulation game, which uses cardboard counters to represent the ships, shuttles, seeking weapons, terrain, and information on a hexagonal map. It is a game system for two or more players (there are some solitaire scenarios). Typically, a player will have one ship in a game, though they can control an entire fleet, if they can keep track of the paperwork and options involved; multiple players can play as teams, with each team splitting up the work of running a squadron or fleet, or a 'free-for-all' fight can be run. Ships represented in the game are typically starships from such classic Star Trek powers as the Federation, Romulan Star Empire, Klingon Empire, or purely Star Fleet Universe creations such as the Hydran Kingdom or Interstellar Concordium. 74c49b5b22 == Business inventory == 74c49b5b22

There are two main types of fire extinguishers: stored-pressure and cartridge-operated. In stored-pressure units, the expellant is stored in the same chamber as the firefighting agent itself. Depending on the agent used, different propellants are used. With dry chemical extinguishers, nitrogen is typically used; water and foam extinguishers typically use air. Stored pressure fire extinguishers are the most common type. Cartridge-operated extinguishers contain the expellant gas... 74c49b5b22

Productivity is often measured as the ratio of (aggregate) output to (aggregate) input in the production of goods and services. Productivity is increased by lowering the amount of labor, capital, energy or materials that go into producing any given amount of economic goods and services. Increases in productivity are largely responsible for the increase in per capita living standards. 74c49b5b22

Supply chain management Interconnected, interrelated or interlinked networks, channels and node businesses combine in the provision of products and services required by end customers in a supply chain. A more narrow definition of supply chain management is the "design, planning, execution, control, and monitoring of supply chain activities with the objective of creating net value, building a competitive infrastructure, leveraging worldwide logistics, synchronising supply with demand and measuring performance globally". procurement (purchasing raw materials/components), operations management, logistics and marketing channels, through which raw materials can be developed into In commerce, supply chain management (SCM) deals with a system of procurement (purchasing raw materials/components), operations management, logistics and marketing channels, through which raw materials can be developed into finished products and delivered to their end customers. This can include the movement and storage of raw materials, work-in-process inventory, finished goods, and end-to-end order fulfilment from the point of origin to the point of consumption 74c49b5b22
