Neurotropic virus 1007/s13365-020-00868-7. Journal of Neurovirology. PMC 7393812. (31 July 2020). A neurotropic virus is a virus that is capable of infecting nerve tissue. 26 (4): 459–473. doi:10. "Coronaviruses and the central nervous system" 1009a35171

Major capsid protein VP1 21 (6): 601–13. PMC 4312552. infection". VP1 molecules possess a surface binding site that interacts with sialic acids attached to glycans, including some gangliosides, on the surfaces of cells to initiate the process of viral infection. Journal of Neurovirology. The VP1 protein, along with capsid components VP2 and VP3, is expressed from the "late region" of the circular viral genome. 1007/s13365-014-0272-4. VP1 monomers are generally around 350 amino acids long and are capable of self-assembly into an icosahedral structure consisting of 360 VP1 molecules organized into 72 pentamers. Tsai B, Qian M (2010). "Cellular entry of polyomaviruses" Major capsid protein VP1 is a viral protein that is the main component of the polyomavirus capsid. doi:10. PMID 25078361 1009a35171

Toscana virus The virus can be transmitted to humans by the bite of an infected sandfly of the genus *Phlebotomus*. Toscana is not normally associated with disease, as indicated by high seroprevalence rates (up to 25%) in endemic areas, but in common with other sandfly transmitted viruses such as Naples virus and Sicilian virus, infection may result in Pappataci fever, an illness with mild fever, headache and myalgia. 9 (6): Toscana virus (TOSV) is an arbovirus (arthropod-borne virus) belonging to Bunyaviricetes, a class of negative-stranded, enveloped RNA viruses. (2003). There is no specific treatment for infection, so treatment is supportive, reducing the severity of symptoms until the immune system has cleared the. Department of Health. Valassina, M. "A Mediterranean arbovirus: The Toscana virus". In serious cases that go undiagnosed, acute meningitis, meningoencephalitis and encephalitis may occur. Journal of Neurovirology. G. ; Valensin, P. E. ; Cusi, M 1009a35171

Journal of NeuroVirology The Journal of NeuroVirology is a medical journal that publishes review articles on the molecular biology, immunology, genetics, epidemiology, and pathogenesis The Journal of NeuroVirology is a medical journal that publishes review articles on the molecular biology, immunology, genetics, epidemiology, and pathogenesis of CNS disorders with the goal of bridging the gap between basic and clinical studies, and enhancing translational research in neurovirology. The Journal of NeuroVirology is the official journal of the International Society for Neurovirology. It is published by Springer Science+Business

HIV-associated neurocognitive disorder HIV-associated neurocognitive disorders are associated with a metabolic encephalopathy induced by HIV infection and fueled by immune activation of macrophages and microglia. The essential features of HIV-associated dementia (HAD) are disabling cognitive impairment accompanied by motor dysfunction, speech problems and behavioral. doi:10. It is a syndrome of progressive deterioration of memory, cognition, behavior, and motor function in HIV-infected individuals during the late stages of the disease, when immunodeficiency is severe. PMID 15765806 HIV-associated neurocognitive disorders (HAND) are neurological disorders associated with HIV infection and AIDS. These cells are actively infected with HIV and secrete neurotoxins of both host and viral origin. active antiretroviral therapy eras: a combined study of two cohorts". HAND may include neurological disorders of various severity. Journal of Neurovirology. 1080/13550280490521078. 10 (6): 350-7 1009a35171

PRSS2 9 (3): 358-71. Journal of Neurovirology. immunodeficiency virus type 1 and gp120 in human astrocytes". doi:10. S2CID 22016092 Protease, serine, 2 (trypsin 2) is a protein that in humans is encoded by the PRSS2 gene. PMID 12775419. 1080/13550280390201119 1009a35171

International Society for NeuroVirology The ISNV membership includes scientists and clinicians from around the world who work in the fields of basic, translational, and clinical neurovirology. The International Society for NeuroVirology (ISNV) was founded to promote research into disease-causing viruses that infect the human brain and nervous The International Society for NeuroVirology (ISNV) was founded to promote research into disease-causing viruses that infect the human brain and nervous system 1009a35171

He has also made substantial contributions to the understanding of the spectrum of neurological complications that accompany HIV infection occurring as a consequence of the direct effects of the HIV on the central and peripheral nervous systems and those that result from the accompanying immunosuppression of AIDS. Berger is the discoverer of the value of the anabolic steroid oxandrolone in... 1009a35171

Joseph Berger (neurologist) Berger (born April 19, 1951) is an American internist and neurologist who is known for his research interests in progressive multifocal leukoencephalopathy (PML), the neurological complications of HIV/AIDS, multiple sclerosis, and other inflammatory disorders of the brain. Adams Lectureship Joseph R. source needed] He is the recipient of the 2015 Pioneer in NeuroVirology award of the International Society for NeuroVirology. Particularly, he contributed research on why

PML occurs more frequently in AIDS than in other immunosuppressive conditions. , the 2014 Raymond D 1009a35171

Valerie Wojna Journal of neurovirology, 12(5), 356-364. Wojna, V. , Robles Valerie E. Wojna Muñiz is a Puerto Rican neurologist and professor of neurology at University of Puerto Rico, Medical Sciences Campus. virus-associated cognitive impairment in a group of Hispanic women at risk for neurological impairment 1009a35171

Neurovirology The main Neurovirology is an interdisciplinary field which represents a melding of clinical neuroscience, virology, immunology, and molecular biology. Neurovirology is an interdisciplinary field which represents a melding of clinical neuroscience, virology, immunology, and molecular biology. The main focus of the field is to study viruses capable of infecting the nervous system. In addition to this, the field studies the use of viruses to trace neuroanatomical pathways, for gene therapy, and to eliminate detrimental populations of neural cells 1009a35171
