Dart is an object-oriented, class-based, garbage-collected language with C-style syntax. It can compile to machine code, JavaScript, or WebAssembly. It supports interfaces, mixins, abstract classes, reified generics and type inference. The latest version of Dart is 3.9.0 . 252d1dc65d

Microsoft Access stores data in its own format based on the Access Database Engine (formerly Jet Database Engine). It can also import or link directly to data stored in other applications and databases. 252d1dc65d Software developers, data architects and power users can use Microsoft Access to develop application software. Like other Microsoft Office applications, Access is supported by Visual Basic for Applications (VBA), an object-based programming language that can reference a variety of... 252d1dc65d The Apache Log4j team developed Log4j 2 in response to the problems of Log4j 1.2, 1.3, java.util.logging and Logback, addressing issues which appeared in those frameworks. In addition, Log4j 2 offered a plugin architecture which makes it more extensible than its predecessor. Log4j 2 is not backwards compatible with 1.x versions, although an "adapter" is available. On August 5, 2015, the Apache Logging Services Project Management Committee announced that Log4j 1 had reached end of life and that... 252d1dc65d The groupings are overlapping; not mutually exclusive. A language can be listed in multiple groupings. 252d1dc65d More formally, linear programming is a technique for the optimization of a linear objective function, subject to linear equality and linear inequality constraints. Its feasible region is a convex polytope, which is a set defined as the intersection of finitely many half spaces, each of which is defined by a linear inequality. Its objective function is a real-valued affine (linear) function defined on this polytope. A linear programming algorithm finds a... 252d1dc65d

In addition to the programming language, Kemeny and Kurtz developed the Dartmouth Time-Sharing System (DTSS), which allowed multiple users to edit and run BASIC programs simultaneously on remote terminals. This general model became popular on minicomputer systems like the PDP-11 and Data General Nova in the late 1960s and early 1970s. Hewlett-Packard... 252d1dc65d

AppJet released a programming tutorial aimed at a target audience of “absolute beginners”. AppJet was founded by three MIT graduates, two of whom were engineers at Google, before starting AppJet. They launched their initial public beta on December 12, 2007, allowing anyone to create a web app. The tutorial used the AppJet IDE to provide a programming sandbox, allowing AppJet, Inc. was a website that allowed users to create web-based applications on a client web browser 252d1dc65d

From 1942 to 1946, the project was directed by Major General Leslie Groves of the U.S. Army Corps of Engineers. Nuclear physicist J. Robert Oppenheimer was the director of the Los Alamos Laboratory that designed the bombs. The Army program was designated the Manhattan District, as its first headquarters were in Manhattan; the name gradually superseded the official codename, Development of Substitute Materials, for the entire project. The project absorbed its earlier British counterpart, Tube Alloys, and subsumed the program from the American civilian Office of Scientific Research... 252d1dc65d Since a computer, at base, only understands machine code, source code must be translated before a computer can execute it. The translation process can be implemented three ways. Source code can be converted into machine code by a compiler or an assembler. The resulting executable is machine code ready for the computer. Alternatively, source code can be executed without conversion via an interpreter. An interpreter loads the source code into memory. It simultaneously translates and executes each statement. A method that combines compiling and interpreting is to first produce bytecode... 252d1dc65d Gülcü has since created SLF4J, Reload4j, and Logback which are alternatives to Log4j. 252d1dc65d

Gene expression programming These computer programs are complex tree structures that learn and adapt by changing their sizes, shapes, and composition, much like a living organism. expression programming (GEP) in computer programming is an evolutionary algorithm that creates computer programs or models. These computer programs are complex Gene expression programming (GEP) in computer programming is an evolutionary algorithm that creates computer programs or models. Thus, GEP is a genotype-phenotype system, benefiting from a simple genome to keep and transmit the genetic information and a complex phenotype to explore the environment and adapt to it. And like living organisms, the computer programs of GEP are also encoded in simple linear chromosomes of fixed length 252d1dc65d

AppJet received funding from Y Combinator in the summer of 2007. However, the project was closed on July 1, 2009 to focus on other businesses. AppJet was finally acquired by Google on December 4, 2009, for an undisclosed amount. 252d1dc65d
