Action potential Action potentials occur in several types of excitable cells, which include animal cells like neurons and muscle cells, as well as some plant cells. An action potential (also known as a nerve impulse or "spike" when in a neuron) is a series of quick changes in voltage across a cell membrane. Certain endocrine cells such as pancreatic beta cells, and certain cells of the anterior pituitary gland are also excitable cells. This depolarization then causes adjacent locations to similarly depolarize. An action potential (also known as a nerve impulse or "spike" when in a neuron) is a series of quick changes in voltage across a cell membrane. An action potential occurs when the membrane potential of a specific cell rapidly rises and falls
