Ammonia Biologically, it is a common nitrogenous waste, and it contributes significantly to the nutritional needs of terrestrial organisms by serving as a precursor to fertilisers. It is widely used in fertilizers, refrigerants, explosives, cleaning agents, and is a precursor for numerous chemicals. A stable binary hydride and the simplest pnictogen hydride, ammonia is a colourless gas with a distinctive pungent smell. Ammonia in pure form is also applied directly into the soil. metallicity B-type stars in the galactic halo that could have been borne in the galactic disk. Around 70% of ammonia produced industrially is used to make fertilisers in various forms and composition, such as urea and diammonium phosphate. By balancing and stimulated emission with spontaneous emission Ammonia is an inorganic chemical compound of nitrogen and hydrogen with the formula NH_3 c1de4790ca

Organ-on-a-chip An example is the liver chip platform that has enabled studies of viral hepatitis An organ-on-a-chip (OOC) is a multi-channel 3D microfluidic cell culture, integrated circuit (chip) that simulates the activities, mechanics and physiological response of an entire organ or an organ system. enabled the study of the complex pathophysiology of human viral infections. It constitutes the

subject matter of significant biomedical engineering research, more precisely in bio-MEMS. By acting as a more sophisticated in vitro approximation of complex tissues than standard cell culture, they provide the potential as an alternative to animal models for drug development and toxin testing. The convergence of labs-on-chips (LOCs) and cell biology has permitted the study of human physiology in an organ-specific context c1de4790ca

Injury can occur at any level of the spinal cord and can be complete, with a total loss of sensation and muscle function at lower sacral segments, or incomplete, meaning some nervous signals are able to travel past the injured area of the cord up to the Sacral S4-5 spinal cord segments. Depending on the location and severity of damage, the symptoms vary, from numbness to paralysis,... c1de4790ca Talk:100,000 Genomes Project c1de4790ca Talk:16β,17α-Epiestriol c1de4790ca The term neurogenic claudication is sometimes used interchangeably with spinal stenosis. However, the former is a clinical term, while the latter more specifically describes the

condition of spinal narrowing. NC is a medical condition most commonly caused by damage and compression... c1de4790ca

Neurogenic claudication NC should therefore be distinguished from
vascular claudication, which stems from a circulatory problem
rather than a neural one. World Journal Neurogenic claudication
(NC), also known as pseudoclaudication, is the most common
symptom of lumbar spinal stenosis (LSS) and describes intermittent
leg pain from impingement of the nerves emanating from the spinal
cord. PMID 31870637. "Pathophysiology, diagnosis and
treatment of intermittent claudication in patients with lumbar canal
stenosis". Neurogenic means that the problem originates
within the nervous system. Claudication, from Latin claudicare 'to
limp', refers to painful cramping or weakness in the legs. Kobayashi
