Square Program Guide and Workbook: Similarity. The area of a square is the side length multiplied by itself, and so in algebra, multiplying a number by itself is called squaring. As with all rectangles, a square's angles are right angles (90 degrees, or  $\pi/2$  radians), making adjacent sides perpendicular. In geometry, a square is a regular quadrilateral. It has four straight sides of equal length and four equal angles. p. Ep. Squares are special cases of rectangles, which have four equal angles, and of rhombuses, which have four equal sides. Outline of logic Logicians study the criteria for the evaluation of arguments. The scope of logic can therefore be very large, ranging from core topics such as the study of fallacies and paradoxes, to specialized analyses of reasoning such as probability, correct reasoning, and arguments involving causality. Fuzzy logic there are also propositions with variable answers, which one might find when asking a group of people to identify a color. In such instances, the truth Fuzzy logic is a form of many-valued logic in which the truth value of variables may be any real number between 0 and 1. By contrast, in Boolean logic, the truth values of variables may only be the integer values 0 or 1. It is employed to handle the concept of partial truth, where the truth value may range between completely true and completely false

The Common Lisp language was developed as a standardized and improved successor of MacLisp. By the early 1980s several groups were already at work on diverse successors to MacLisp: Lisp Machine Lisp (aka ZetaLisp), Spice Lisp, NIL and S-1 Lisp. Common Lisp sought to unify, standardise, and extend the features of these MacLisp dialects. Common Lisp is not an implementation, but rather a language specification. Several implementations of the Common Lisp standard are available, including free...
