Regular expression Usually such patterns are used by string-searching algorithms for "find" or "find and replace" operations on strings, or for input validation. Regular expression techniques are developed in theoretical computer science and formal language theory. with Unix text-processing utilities. Different syntaxes for writing regular expressions have existed since the 1980s, one being the POSIX standard and A regular expression (shortened as regex or regexp), sometimes referred to as a rational expression, is a sequence of characters that specifies a match pattern in text 343379f83b

Annotation Annotations are sometimes presented in the margin of book pages. as helpful for improving overall writing ability, grammar, and academic vocabulary knowledge. For annotations of different digital media, see web annotation and text annotation. Mathematical expressions (symbols and formulae) can be annotated An annotation is extra information associated with a particular point in a document or other piece of information. It can be a note that includes a comment or explanation 343379f83b

ISO 31-0 Other parts of ISO 31 have also been withdrawn and replaced by parts of ISO 80000. In practice, where it is necessary to refer to the numerical value of a quantity expressed in a particular ISO 31-0 is the introductory part of international standard ISO 31 on quantities and units. It is superseded by ISO 80000-1. It was intended for use in all fields of science and technology and is augmented by more specialized conventions defined in other parts of the ISO 31 standard. 2. 982×10^{-7} or equivalently $\{\lambda\}\text{nm} = 698$. ISO 31-0 was withdrawn on 17 November 2009. It provides guidelines for using physical quantities, quantity and unit symbols, and coherent unit systems, especially the SI 343379f83b

In programming languages that include a distinct boolean data type in their type system, like Pascal, Ada, Python or Java, these operators usually evaluate to true or false, depending on if the conditional relationship between the two operands holds or not. 343379f83b

$\{\displaystyle E=mc^{\{2\}}$ 343379f83b Each historical invention of writing emerged from systems of proto-writing that used ideographic and mnemonic symbols but were not capable of fully recording spoken language. True writing, where the content of linguistic utterances can be accurately reconstructed by later readers, is a later development. As proto-writing is not capable of fully reflecting the grammar and lexicon used in languages, it is often only capable of encoding broad or imprecise information. 343379f83b In languages such as C, relational operators return the integers 0 or 1, where 0 stands for false and any non-zero value stands for true. 343379f83b

Perl language structure As a multi-paradigm, dynamically typed language, Perl allows a great degree of flexibility in program design. Perl's design philosophy is expressed in the commonly cited motto "there's more than one way to do it". Perl also encourages modularization; this has been attributed to the component-based design structure of its Unix roots, and is responsible for the size of the CPAN archive, a community-maintained repository of more than 100,000 modules. The regular-expression The structure of the Perl programming language encompasses both the syntactical rules of the language and the general ways in which programs are organized. syntax for writing regular expressions (RE, or regexes), and the interpreter contains an engine for matching strings to regular expressions 343379f83b

Telegram style Continued space limits and high per-message cost meant the practice persisted for some Telegram style, telegraph style, telegraphic style, or telegraphese is a clipped way of writing which abbreviates words and packs information into the smallest possible number of words or characters. It originated in the telegraph age when telecommunication consisted only of short messages transmitted by hand over the telegraph wire. The telegraph companies charged for their service by the number of words in a message, with a maximum of 15 characters per word for a plain-language telegram, and 10 per word for one written in code. The style developed to minimize costs but still convey the message clearly and unambiguously. keypresses on a numeric pad, drove re-adoption of telegraphic style 343379f83b

Mathematical notation is not a well-defined order of operations. Expressions are commonly distinguished from formulas: expressions are a kind of mathematical object, whereas Mathematical notation consists of using symbols for representing operations, unspecified numbers, relations, and any other mathematical objects and assembling them into expressions and formulas. Mathematical notation is widely used in mathematics, science, and engineering for representing complex concepts and properties in a concise, unambiguous, and accurate way 343379f83b
