History of the periodic table For example, all elements in group (column) 18 are noble gases that are largely—though not completely—unreactive. In the basic form, elements are presented in order of increasing atomic number, in the reading sequence. Then, rows and columns are created by starting new rows and inserting blank cells, so that rows (periods) and columns (groups) show elements with recurring properties (called periodicity). Comptes rendus de l'Académie des Sciences (in French) The periodic table is an arrangement of the chemical elements, structured by their atomic number, electron configuration and recurring chemical properties. vis tellurique" [Table of the natural classification of elements, called the "telluric helix"] 08faf774a1

Innis (November 5, 1894 – November 8, 1952) was a Canadian professor of political economy at the University of Toronto and the author of seminal works on media, communication theory, and Canadian economic history. Innis has been referred to as the "father of communications theory" and as the "father of Canadian economic history". Innis's work. He helped develop the staples thesis, which holds that Canada's culture, political history, and economy have been decisively influenced by the exploitation and export of a series of "staples" such as fur, fish, lumber, wheat, mined metals, and coal. The staple thesis dominated economic history in Canada from the 1930s to 1960s, and continues to be a fundamental part of the Canadian political economic tradition. That also underlies the politicization of Innis's position vis-à-vis that of McLuhan

Karl Marx Marx's ideas and their subsequent development, collectively known as Marxism, have had enormous influence. inviolable than handsome William I [a Prussian king]. He is best-known for the 1848 pamphlet *The Communist Manifesto* (written with Friedrich Engels), and his three-volume *Das Kapital* (1867–1894), a critique of classical political economy which employs his theory of historical materialism in an analysis of capitalism, in the culmination of his life's work. Still, when it comes to bare-faced

Hippocrates 460 – c. 370 BC. The Hippocratic school of medicine revolutionized ancient Greek medicine, establishing it as a discipline distinct. His studies set out the basic ideas of modern-day specialties, including surgery, urology, neurology, acute medicine and orthopedics. 370 BC), also known as Hippocrates II, was a Greek physician and philosopher of the classical period who is considered one of the most outstanding figures in the history of medicine. He is traditionally referred to as the "Father of Medicine" in recognition of his lasting contributions to the field, such as the use of prognosis and clinical observation, the systematic categorization of diseases, and the (however misguided) formulation of humoral theory. therapeutic approach was based on 'the healing power of nature' (Latin: vis medicatrix naturae). According to this doctrine, the body contains within Hippocrates of Kos (; Ancient Greek: Ἱπποκράτης

 08faf774a1 Meyer-Bothling is a senior consultant eye surgeon who practises in the South East of England, United Kingdom. He has a research background in glaucoma and diabetic retinopathy and specialist training in retinal diseases. He specialises in complex cataract surgery and already in the 1990s

he began publishing the advantages of performing small incision cataract surgery under topical anaesthesia. 08faf774a1

Papal primacy The first documented use of Papal primacy, also known as the primacy of the bishop of Rome, is an ecclesiological doctrine in the Catholic Church concerning the respect and authority that is due to the pope from other bishops and their episcopal sees. Jerusalem led successive bishops of Rome to attempt a sharper definition of their ecclesial position vis-a-vis the other bishops. While the doctrine is accepted at a fundamental level by both the Catholic Church (Eastern and Western) and the Eastern Orthodox Church, the two disagree on the nature of primacy 08faf774a1
