History of the race and intelligence controversy Rothman, S. 1037/0003-066x. 42 The history of the race and intelligence controversy concerns the historical development

of a debate about possible explanations of group differences encountered in the study of race and intelligence. (1987), "Survey of expert opinion on intelligence and aptitude testing", *American Psychologist*, 42 (2): 137-144, doi:10.1037/0003-066X.42.2.137. Since the beginning of IQ testing around the time of World War I, there have been observed differences between the average scores of different population groups, and there have been debates over whether this is mainly due to environmental and cultural factors, or mainly due to some as yet undiscovered genetic factor, or whether such a dichotomy between environmental and genetic factors is the appropriate framing of the debate. Today, the scientific consensus is that genetics does not explain differences in IQ test performance between racial groups

(NNAT) Wide An intelligence quotient (IQ) is a total score derived from a set of standardized tests or subtests designed to assess human intelligence. For modern IQ tests, the raw score is transformed to a normal distribution with mean 100 and standard deviation 15. This results in approximately two-thirds of the population scoring between IQ 85 and IQ 115 and about 2 percent each above 130 and below 70. Originally, IQ was a score obtained by dividing a person's estimated mental age, obtained by administering an intelligence test, by the person's chronological age
