Occupational safety and health engineering – Branch of engineering which deals with the optimization of complex processes or systems Industrial and organizational psychology – Branch of psychology Occupational safety and health (OSH) or occupational health and safety (OHS) is a multidisciplinary field concerned with the safety, health, and welfare of people at work (i. , while performing duties required by one's occupation). OSH is related to the fields of occupational medicine and occupational hygiene and aligns with workplace health promotion initiatives. OSH also protects all the general public who may be affected by the occupational environment. e b87caf1519

Throughout history, trigonometry has been applied in areas such as geodesy, surveying, celestial mechanics, and navigation. b87caf1519 According to the official estimates of the United Nations, the WHO/ILO Joint Estimate of the Work-related Burden of Disease and Injury, almost 2 million people die each year due to exposure to occupational risk factors. Globally, more than 2.78 million people die annually as a result of workplace-related accidents or diseases, corresponding... b87caf1519

Human physiology of underwater diving It is likely that HPNS cannot be entirely prevented but there are effective methods to delay or change the development Human physiology of underwater diving is the physiological influences of the underwater environment on the human diver, and adaptations to operating underwater, both during breath-hold dives and while breathing at ambient pressure from a suitable breathing gas supply. between different dives by the same diver. Several factors influence the diver, including immersion, exposure to the water, the limitations of breath-hold endurance, variations in ambient pressure, the effects of breathing gases at raised ambient pressure, effects caused by the use of breathing apparatus, and sensory impairment. All of these may affect diver performance and safety. It, therefore, includes the range of physiological effects generally limited to human ambient pressure divers either freediving or using underwater breathing apparatus b87caf1519

Christian J. Lambertsen Physiol. Later, after the war, he called it Laru (acronym for Lambertsen Amphibious Respiratory Unit) and finally, in 1952, he changed his invention's name again to SCUBA (Self Contained Underwater Breathing Apparatus). Lambertsen designed a series of rebreathers in 1940 (patent filing date: 16 Dec 1940) and in 1944 (patent issue date: 2 May 1944) and first called his invention breathing apparatus. "Optimization of oxygen tolerance extension in rats by intermittent exposure". Although diving regulator technology was invented by Émile Gagnan and Jacques-Yves Cousteau in 1943 and was unrelated. Appl. Lambertsen CJ, Gelfand R, Troxel AB (March 2006). He was a environmental medicine and diving medicine specialist who was principally responsible for developing the United States Navy frogmen's rebreathers in the early 1940s for underwater warfare. J. 100 (3): Christian James Lambertsen (May 15, 1917 – February 11, 2011) was an American medical researcher b87caf1519

Trigonometry 162, "Greek Trigonometry and Mensuration". Pimentel, Ric; Wall, Terry (2018). Cambridge IGCSE Core Mathematics (4th ed Trigonometry (from Ancient Greek τρίγωνον (trígōnon) 'triangle' and μέτρον (métron) 'measure') is a branch of mathematics concerned with relationships between angles and side lengths of triangles. The Greeks focused on the calculation of chords, while mathematicians in India created the earliest-known tables of values for trigonometric ratios (also called trigonometric functions) such as sine. Boyer (1991), p. ISBN 0-618-64332-X. The field emerged in the Hellenistic world during the 3rd century BC from applications of geometry to astronomical studies. In particular, the trigonometric functions relate the angles of a right triangle with ratios of its side lengths b87caf1519
