

Alberta Barrier Free Design Guide

2008 Safety Codes

Besides the limits of breath-hold, immersion in water and exposure to high ambient pressure also have physiological effects that limit the depths and duration possible in freediving. 8f9572d10d

Fused grid Both concepts were conscious attempts to organize urban space for habitation. The grid was conceived and applied in the pre-automotive era of cities starting circa 2000 BC and prevailed until about 1900 AD. The Radburn pattern emerged in 1929 about thirty years following the invention of the internal combustion engine powered automobile and in anticipation of its eventual dominance as a means for mobility and transport. network pattern first proposed in 2002 and subsequently applied in Calgary, Alberta (2006) and Stratford, Ontario (2004). It represents a synthesis of two The fused grid is a street network pattern first proposed in 2002 and subsequently applied in Calgary, Alberta (2006) and Stratford, Ontario (2004). Both these patterns appear throughout North America. It represents a synthesis of two well known and extensively used network concepts: the "grid" and the "Radburn" pattern, derivatives of which are found in most city suburbs 8f9572d10d

The primary features of roads include lanes, sidewalks (pavement), roadways (carriageways), medians, shoulders, verges, bike paths (cycle paths), and shared-use paths. 8f9572d10d

Freediving Freediving, free-diving, free diving, breath-hold diving, or skin diving, is a mode of underwater diving that relies on breath-holding until resurfacing Freediving, free-diving, free diving, breath-hold diving, or skin diving, is a mode of underwater diving that relies on breath-holding until resurfacing rather than the use of breathing apparatus such as scuba gear 8f9572d10d

LGBTQ rights in Canada In a landmark decision in 1995, *Egan v Canada*, the Supreme Court of Canada held that sexual orientation is constitutionally protected under the equality clause of the Canadian Charter of Rights and Freedoms. 7(1). 210, s. In 2005, Canada became the fourth country in the world, and the first in the Americas, that legalized same-sex marriage. 5, s. 13A-3). A-25. Alberta Human Rights Act, RSA 2000, c. Same-sex sexual activity, in private between consenting adults, was decriminalized in Canada on June 27, 1969, when the Criminal Law Amendment Act, 1968-69 (also known as Bill C-150) was brought into force upon royal assent. 3(1) Human Rights Code, RSBC 1996, c. The Saskatchewan Human Rights Code, 2018 Canadian lesbian, gay, bisexual, transgender, and queer (LGBTQ) rights are some of the most extensive in the world. In 2022, Canada was the third country in the world, and the first in North America, that statutorily banned conversion therapy nationwide 8f9572d10d

In the United States, engineers use the term modern roundabout to refer to junctions

installed after 1960 that incorporate design rules to increase safety. Compared to stop signs, traffic signals, and earlier forms of roundabouts, modern roundabouts reduce the likelihood and severity of collisions greatly by reducing traffic speeds through horizontal deflection and minimising T-bone and head-on collisions. Variations on the basic concept include integration with tram or train lines, two-way flow, higher speeds and many others.

County highway Route numbering can be determined by each county alone, by mutual agreement among counties, or by a statewide pattern. to be contrasted with survey township roads which exist in Alberta after the 1981 Alberta rural addressing system was introduced. Range roads will run A county highway (also county road or county route; usually abbreviated CH or CR) is a road in the United States and in the Canadian province of Ontario that is designated and/or maintained by the county highway department

The words "road" and "street" are commonly considered to be interchangeable, but the distinction is important in urban design. In countries following the Vienna convention, the motorway qualification implies that walking and parking are forbidden. Good road design, road maintenance and traffic management can make cycling safer and more useful. Settlements with a dense network of interconnected streets tend to be places for getting around by bike. Their cycling networks can give people direct, fast, easy and convenient routes. A fully controlled-access highway provides an unhindered flow of traffic, with no traffic signals, intersections or property access. They are free of any at-grade crossings with other roads, railways, or pedestrian paths, which are instead carried... Examples of freediving activities are traditional fishing techniques, competitive and non-competitive freediving, competitive and non-competitive spearfishing and freediving photography, synchronised swimming, underwater football, underwater rugby, underwater hockey, underwater target shooting and snorkeling. There are also a range of "competitive apnea" disciplines; in which competitors attempt to...

Controlled-access highway Some of these may be limited-access highways, although this term can also refer to a class of highways with somewhat less isolation from other traffic. Other similar terms include throughway or thruway and parkway. reservation containing a traffic barrier or grass. Common English terms are freeway, motorway, and expressway. Elimination of conflicts with other directions of traffic dramatically improves safety, while increasing traffic A controlled-access highway is a type of highway that has been designed for high-speed vehicular traffic, with all traffic flow—ingress and egress—regulated

Roundabout City of Carmel, Indiana, USA, Roundabouts page Car Free America Roundabout Safety and Design Guide Video of Highway Roundabout in Canada TRL, The UK's A roundabout, a rotary and a traffic circle are types of circular road in which traffic is permitted to flow in one direction around a central island, and priority is typically given to traffic already in the junction

For pedestrians, traffic exiting the roundabout comes...

Canadian Registration Number The pressure safety design registration approval given by safety authority registrars in Canada is called a Canadian Registration Number (CRN). Regulation (PESR) User Guide Consult the act, regulations and codes section of the Alberta Boilers Safety Association website for more comprehensive and up-to-date Canadian pressure laws, Acts, rules & regulations are enforced by provincial and territorial safety authorities. ENG) who is not employed by a safety authority does not have that same right to stamp regulated pressure equipment or pressure system drawings for construction, and doing so may result in fines or professional license revocation, or jail time. Unlike the United States where licensed professional engineers (PE) may stamp pressure equipment and pressure system/plant drawings in the non-nuclear sectors for construction, in Canada in general a professional engineer (P. Pressure equipment must be registered in each province or territory where

In favorable circumstances, rumble strips are effective (and cost-effective) at reducing accidents due to inattention. The effectiveness of shoulder rumble strips is largely dependent on a wide and stable road shoulder for a recovery, but there are...

8f9572d10d There are many types of roads, including parkways, avenues, controlled-access highways (freeways, motorways, and expressways), tollways, interstates, highways, and local roads. 8f9572d10d

Road Most modern roads are paved. They also differ from stroads, which combine the features of streets and roads. Safety improvements such as traffic signs, crash barriers, raised pavement markers and other forms of road A road is a thoroughfare used primarily for movement of traffic. Roads differ from streets, whose primary use is local access. dependent on economic factors and expected usage 8f9572d10d

Cycling infrastructure Dutch approach of addressing cycling infrastructure safety UK cycle infrastructure design guide 2020 UK cycle rail toolkit 3 (2023) CyclOSM and Opencyclemap Cycling infrastructure is all infrastructure cyclists are allowed to use. Roads used by motorists are also cycling infrastructure, except where cyclists are barred such as many freeways/motorways. It includes amenities such as bike racks for parking, shelters, service centers and specialized traffic signs and signals. The more cycling infrastructure, the more people get about by bicycle. Bikeways include bike paths, bike lanes, cycle tracks, rail trails and, where permitted, sidewalks 8f9572d10d

Any county-maintained road, whether or not it is given a signed number, can be called a county road. Depending on the state or province and county, these roads can be named after geographic features, communities, or people. Or they may be assigned a name determined by a standardized grid reference: "East 2000" would be a north-south road running 20 blocks/miles/km east of the designated zero point. Many other variations are also used. Many locales have somewhat... 8f9572d10d

Rumble strip Rumble strips may also be installed in a series across the direction of travel, to warn drivers of a stop or slowdown ahead, or of an approaching danger spot. other roadway users, to develop policies, design standards and implementation techniques that address the safety and operational needs of all roadway users Rumble strips (also known as sleeper lines or alert strips) are a traffic calming feature to alert

inattentive drivers of potential danger, by causing a tactile vibration and audible rumbling transmitted through a vehicle's wheels into its interior. A rumble strip is applied along the direction of travel following an edgeline or centerline, to alert drivers when they drift from their lane 8f9572d10d
