The first excimer laser design used a xenon dimer molecule (Xe₂) as the lasing medium, and the earliest laser designs used xenon flash lamps as pumps. Xenon is also used to search for hypothetical weakly interacting massive particles and as a propellant for ion thrusters in spacecraft. af55a3e5bd Found in oceans and seas around the world, humpback whales typically migrate between feeding areas towards the poles and breeding areas near the equator. Nanotechnology At this scale, commonly known as the nanoscale, surface area and quantum mechanical effects become important in describing properties of matter. Gerber also invented the analogous atomic force microscope that year. This definition of nanotechnology includes all types of research and technologies that deal with these special properties. Second, fullerenes (buckyballs) were discovered in 1985 by Harry Kroto, Richard Nanotechnology is the manipulation of matter with at least one dimension sized from 1 to 100 nanometers (nm). An earlier understanding of nanotechnology referred to the particular technological goal of precisely manipulating atoms and molecules for fabricating macroscale products, now referred to as molecular nanotechnology. It is common to see the plural form "nanotechnologies" as well as "nanoscale technologies" to refer to research and applications whose common trait is scale
