He spent the first half of his career at the University of Jena as a biostatistician. At Jena, he worked on problems in the analysis of high dimensional biological data, the development and validation of microarray-based predictive models and study design. He then became professor at Furtwangen University. Intensive farming The introduction of certain legume crops to pastures Intensive agriculture, also known as intensive farming (as opposed to extensive farming), conventional, or industrial agriculture, is a type of agriculture, both of crop plants and of animals, with higher levels of input and output per unit of agricultural land area. fertility and quality, intensified nutrient cycling, integrated pest control, and improved biodiversity. It is characterized by a low fallow ratio, higher use of inputs such as capital, labour, agrochemicals and water, and higher crop yields per unit land area 8d2afbf904

Publishing books in ebook format. Preparing a book for e-book publication is the same as print publication, with only minor variations in the process to account for Publishing is the process of making information, literature, music, software, and other content, physical or digital, available to the public for sale or free of charge. Traditionally, the term publishing refers to the creation and distribution of printed works, such as books, comic books, newspapers, and magazines to the public. With the advent of digital information systems, the scope has expanded to include digital publishing such as e-books, digital magazines, websites, social media, music, and video game publishing 8d2afbf904

The result is the representation of an object, image, sound, document, or signal (usually an analog signal) obtained by generating a series of numbers that describe a discrete set of points or samples. The result is called digital representation or, more specifically, a digital image, for the object, and digital form, for the signal

Music theory The Oxford Companion to Music describes three interrelated uses of the term "music theory": The first is the "rudiments", that are needed to understand music notation (key signatures, time signatures, and rhythmic notation); the second is learning scholars' views on music from antiquity to the present; the third is a sub-topic of musicology that "seeks to define processes and general principles in music". ISBN 978-1412046770, 978-1412231350 (ebook). The musicological approach to theory differs from music analysis "in that it takes as its starting-point not the individual work or performance but the fundamental materials from which it is built. Baur, John (2014). Practical Music theory is the study of theoretical frameworks for understanding the practices and possibilities of music. Beyond: A Music Lover's Guide to Hindustani Music. Bayesian inference Data, Uncertainty and Inference — Informal introduction with many examples, ebook (PDF) freely available at causaScientia Bayesian inference (BAY-zee-ən or BAY-zhən) is a method of statistical inference in which Bayes' theorem is used to calculate a probability of a hypothesis, given prior evidence, and update it as more information becomes available. In the philosophy of decision theory, Bayesian inference is closely related to subjective probability, often called "Bayesian probability. Fundamentally, Bayesian inference uses a prior distribution to estimate posterior probabilities. Bayesian inference has found application in a wide range of activities, including science, engineering, philosophy, medicine, sport, and law. Bayesian inference is an important technique in statistics, and especially in mathematical statistics. Bayesian updating is particularly important in the dynamic analysis of a sequence of data. Division of labour Modern flexible manufacturing systems require The division of labour is the separation of the tasks in any economic system or organisation so that participants may specialise (specialisation). Training and combinations of equipment and other assets acting together are often important. For example, an individual may specialise by acquiring tools and the skills to use them effectively just as an organisation may specialise by acquiring specialised equipment and hiring or training skilled operators. Specialised capabilities may include equipment or natural resources as well as skills. The division of labour is the motive for trade and. Individuals, organisations, and nations are endowed with or acquire specialised capabilities, and either form combinations or trade to take advantage of the capabilities of others in addition to their own. between stages can also help to reduce the problem to some extent but are costly and can hamper quality control 8d2afbf904

Much of his philosophical work deals with the issues of how one lives as a "single individual", giving priority to concrete human reality over abstract thinking and highlighting the importance of personal choice and commitment 8d2afbf904

Statistics is both a formal science and a practical theory of scientific inquiry, and both aspects are considered in statistics education. Education in statistics has similar concerns as does education in other mathematical sciences, like logic, mathematics, and computer science. At the same time, statistics is concerned with evidence-based reasoning, particularly with the analysis of data. Therefore, education in statistics has strong similarities to education in empirical disciplines like psychology and chemistry, in which education is closely tied to "hands-on" experimentation. 8d2afbf904 Digitization is of crucial importance to data

Green belt (United Kingdom) The term, coined by Octavia Hill in 1875, refers to a ring of countryside where urbanisation In British town planning, the green belt is a policy for controlling urban growth. The term, coined by Octavia Hill in 1875, refers to a ring of countryside where urbanisation will be resisted for the foreseeable future, maintaining an area where local food growing, forestry and outdoor leisure can be expected to prevail. The fundamental aim of green belt policy is to prevent urban sprawl by keeping land permanently open, and consequently the most important attribute of green belts is their openness. planning, the green belt is a policy for controlling urban growth 8d2afbf904
