Reinforced concrete Many different types of structures and components of structures can be built using reinforced concrete elements including Reinforced concrete, also called ferroconcrete or ferro-concrete, is a composite material in which concrete's relatively low tensile strength and ductility are compensated for by the inclusion of reinforcement having higher tensile strength or ductility. Use of Reinforced Concrete. In corrosion engineering terms, when designed correctly, the alkalinity of the concrete protects the steel rebar from corrosion. In terms of volume used annually, it is one of the most common engineering materials. However, post-tensioning is also employed as a technique to reinforce the concrete. The reinforcement is usually, though not necessarily, steel reinforcing bars (known as rebar) and is usually embedded passively in the concrete before the concrete sets ff8d904d79
