Deep learning convolutional neural networks, generative adversarial networks, transformers, and neural radiance fields. Methods used can be supervised, semi-supervised or unsupervised. The adjective "deep" refers to the use of multiple layers (ranging from three to several hundred or thousands) in the network. These architectures have been applied to fields In machine learning, deep learning focuses on utilizing multilayered neural networks to perform tasks such as classification, regression, and representation learning. The field takes inspiration from biological neuroscience and is centered around stacking artificial neurons into layers and "training" them to process data 73ec423ae3

The list contains 50,052 articles. --Cewbot (talk) 14:18, 26 August 2025 (UTC) 73ec423ae3
