The command is analogous to the Stratus OpenVOS create_dir command. MetaComCo TRIPOS and AmigaDOS provide a similar MakeDir command to create new directories. The numerical computing environments MATLAB and GNU Octave include an mkdir 013773313e nslookup is a member of the BIND name server software. Andrew Cherenon created nslookup as a class project at UC Berkeley in 1986 and it first shipped in 4.3-Tahoe BSD. In the development of BIND 9, the Internet Systems Consortium planned to deprecate nslookup in favor of host and dig. This decision was reversed in 2004 with the release of BIND 9.3 and nslookup has been fully supported since then. 013773313e In early versions of Unix (4.1BSD and early versions of System V), this command had to be setuid root as the kernel did not have an mkdir syscall. Instead, it made the directory with mknod and linked in the . and .. directory entries manually. The command is available in MS-DOS versions 2 and later. Digital Research DR DOS 6.0 and Datalight ROM-DOS also include an implementation of the md and mkdir commands. 013773313e

Chuck Colby also helped design the "Syzygy" original prototype of Atari Pong that was built into a suitcase so that it could be carried around and demonstrated to potential investors. On July 10, 2003, he donated the prototype to the DigiBarn Computer Museum. 013773313e The Linux version of nslookup is the original BSD version written by Andrew Cherenon. 013773313e The shutdown feature and command is available in Microsoft Windows, ReactOS, HP MPE/iX, and in a number of Unix and Unix-like operating systems such as Apple macOS. 013773313e == History == 013773313e Colby's first invention was the Colby TR-2 transistor radio, which he designed at the precocious age of 12 and sold to family, friends and customers on his paper-route, and is possibly the first pocket transistor radio. At 15, he built for his high

school science project the world's first home earth satellite station capable of receiving signals from the Russian satellite Sputnik. As a college student, his passion for radio and inventing brought him attention in the LA Times when he and a friend built their own TV stations to broadcast video to each other over the airwaves. Shortly afterwards, he built a video security system for use by NASA. 013773313e Unlike dig, nslookup does not use the operating system's local Domain Name System resolver library to perform its queries, and thus may behave differently. Additionally, vendor-provided versions may include the output of other sources of name information, such as host files, and Network Information Service. Some behaviors of nslookup may be modified by the contents of resolv.conf. 013773313e

Shutdown (computing) After a computer is shut down, main components such as CPUs, RAM modules and hard disk drives are powered down, although some internal components, such as an internal clock, may retain power. The command is available in Microsoft Windows, ReactOS, and in Apple macOS. The ReactOS version was developed by Ged Murphy and is licensed under the GPL. 013773313e The command causes the shell or program to terminate. If performed within an interactive command shell, the user is logged out of their current session, and/or user's current console or terminal connection is disconnected. Typically an optional exit code can be specified, which is typically a simple integer value that is then returned to the parent process. 013773313e
