Bearing (mechanical) represent service life of the bearing. This is the basic load rating as a reference, and A bearing is a machine element that constrains relative motion to only the desired motion and reduces friction between moving parts. Bearings are classified broadly according to the type of operation, the motions allowed, or the directions of the loads (forces) applied to the parts. Bearings are also rated using the C0 (static loading) value. Most bearings facilitate the desired motion by minimizing friction. The design of the bearing may, for example, provide for free linear movement of the moving part or for free rotation around a fixed axis; or, it may prevent a motion by controlling the vectors of normal forces that bear on the moving parts 78aeef62c2

2012 78aeef62c2 The term "bearing" is derived from the verb "to bear"; a bearing being a machine element that allows one part to bear (i.e., to support) another. The simplest bearings are bearing surfaces, cut or formed into... 78aeef62c2
