BlackBerry The BlackBerry pioneered push
notifications and popularized the practice of "thumb
typing" using its QWERTY keyboard, something that
would become a trademark feature of the line. The
first BlackBerry was a pager-like device launched in
1999 in North America, running on the Mobitex
network (later also DataTAC) and became very popular
because of its "always on" state and ability to send
and receive email messages wirelessly. 8520/8530

Sliders supplanted the flip form, since they allowed
manufacturers to pack more keypad buttons and
features (especially the side slider or QWERTY
slider) into the same form factor, while touchscreen
interfaces were still in their infancy. By the
late-2000s, "slider" designs reached the peak...

Slider (mobile phones) This design also appeared on
Alcatel's OT Club and OT View Slider is a
general term of a form factor in mobile phones
composed of usually two, but sometimes more,
sections that slide past each other on rails. those
that slide down to reveal the keypad, seen in the

"banana"-like Nokia 8110 released in 1996. The goal of a sliding form factor is to allow the operator to take advantage of full physical keyboards or keypads, without sacrificing portability, by retracting them into the phone when they are not in use. Most slider phones have a display segment which houses the device's screen, while another segment contains the keypad or keyboard and slides out for use
