Water UK National Physical Laboratory, Calculation of absorption of sound in seawater Archived 3 October 2016 at the Wayback Water is an inorganic compound with the chemical formula H₂O. It is the main constituent of Earth's hydrosphere and the fluids of all known living organisms in which it acts as a solvent. It is a transparent, tasteless, odorless, and nearly colorless chemical substance. Due to its presence in all organisms, its chemical stability, its worldwide abundance and its strong polarity relative to its small molecular size; water is often referred to as the "universal solvent". Water, being a polar molecule, undergoes strong intermolecular hydrogen bonding which is a large contributor to its physical and chemical properties. Retrieved 26 October 2007. It is vital for all known forms of life, despite not providing food energy or being an organic micronutrient. 2007 5612318579
