Wikipedia:Reference desk/Archives/Science/January 2006 $O_2 = -I_1 \cdot I_2$, and $O_3 = O_1 + O_2$, or more accurately, $O_1 = \text{sig}(B_1 + W_1 \cdot ((I_1 - B_2) \cdot (I_2 - B_3)))$, $O_2 = \text{sig}(B_1 - W_1 \cdot ((I_1 - B_2) \cdot (I_2 - B_3)))$, and $O_3 = \text{sig}(-W_3(O_1 + O_2 - .5))$, where W 41ee90e244

Since the 1979 Islamic revolution, Iran's economy has experienced slower economic growth, high inflation, and recurring crises. The 8-year Iran–Iraq War (1980–1988) and

subsequent international sanctions severely disrupted development. In recent years, Iran's economy has faced stagnant growth, inflation rates among the highest in the world, currency devaluation,...

The subgranular zone (SGZ), part of the dentate gyrus of the hippocampus, where neural stem cells give birth to granule cells (implicated in memory formation and

learning).

Economy of Iran 15, 2016). Nevertheless since 2024, Iran has been suffering from an energy crisis. “P&G's Road Map to Business in Iran” B1. With 10% of the world's proven oil reserves

and 15% of its gas reserves, Iran is considered an "energy superpower". It consists of hydrocarbon, agricultural and service sectors, in addition to manufacturing and financial services, with over 40 industries traded on the Tehran Stock Exchange. Clifford Krauss: A New Stream of Oil for Iran, but Not Right Away The New Iran has a mixed, centrally planned economy with a large public sector. p. Wall Street Journal 41ee90e244

HSP60 is implicated in mitochondrial
protein import and macromolecular
assembly. It may facilitate the correct

folding of imported proteins, and may also prevent misfolding and promote the refolding and proper assembly of unfolded polypeptides generated under stress conditions in the mitochondrial matrix. HSP60 interacts with HRAS and with HBV protein X and HTLV-1 protein... 41ee90e244

GroEL To function properly, GroEL requires the lid-like cochaperonin protein complex GroES. The intermediate domain binds GroEL is a protein which belongs to the chaperonin family of molecular chaperones, and is found in many bacteria. In eukaryotes the organellar proteins Hsp60 and Hsp10 are structurally and functionally nearly identical to GroEL and GroES, respectively, due to their endosymbiotic origin. It is required for the proper folding of many proteins. domain, and the intermediate domain. The equatorial domain contains the binding site for ATP and for the other heptameric ring 41ee90e244

Insulin In these tissues the absorbed glucose is converted into either glycogen, via glycogenesis, or fats (triglycerides), via lipogenesis; in the liver, glucose is converted into both. In May 1975, at the

American Diabetes Association meeting
Insulin (, from Latin insula, 'island') is a peptide hormone produced by beta cells of the pancreatic islets encoded in humans by the insulin (INS) gene. It regulates the metabolism of carbohydrates, fats, and protein by promoting the absorption of glucose from the blood into cells of the liver, fat, and skeletal muscles. It is thus an anabolic hormone, promoting the. It is the main anabolic hormone of the body. Glucose production and secretion by the liver are strongly inhibited by high concentrations of insulin in the blood. Circulating insulin also affects the synthesis of proteins in a wide variety of tissues. prior to proinsulin that he determined must be a larger precursor molecule upstream of proinsulin

41ee90e244 The subventricular zone (SVZ)

of the lateral ventricles, which can be divided into three microdomains: lateral, dorsal and medial. Neural stem cells migrate to the olfactory bulb through the rostral migratory stream where they differentiate into interneurons participating in the sense of smell. In humans, however, few if any olfactory bulb neurons are generated after birth. 41ee90e244
