Diver training Equipment technicians are generally primarily trained as mechanical or electrical engineering technicians, with specialisation training in specific diving Diver training is the set of processes through which a person learns the necessary and desirable skills to safely dive underwater within the scope of the diver training standard relevant to the specific training programme. Most diver training follows procedures and schedules laid down in the associated training standard, in a formal training programme, and includes relevant foundational knowledge of the underlying theory, including some basic physics, physiology and environmental information, practical skills training in the selection and safe use of the associated equipment in the specified underwater environment, and assessment of the required skills and knowledge deemed necessary by the certification agency to allow the newly certified diver to dive within the specified range of conditions

Industrial and production engineering W. engineering includes three areas: Mechanical engineering (where the production engineering comes from), industrial engineering, and management science. Industrial engineering dates back all the way to the industrial revolution, initiated in 1700s by Sir Adam Smith, Henry Ford, Eli Whitney, Frank Gilbreth and Lilian Gilbreth, Henry Gantt, F. It is concerned with the

understanding and application of engineering procedures in manufacturing processes and production methods. Industrial and production engineering includes three areas: Mechanical engineering (where the production. After the 1970s, industrial and production engineering developed worldwide and started to widely use automation and robotics. The Industrial and production engineering (IPE) is an interdisciplinary engineering discipline that includes manufacturing technology, engineering sciences, management science, and optimization of complex processes, systems, or organizations.
