History of computer animation A hidden surface algorithm for computer generated halftone pictures (PhD thesis). It was only by the early 1960s when digital computers had become widely established, that new avenues for innovative computer graphics blossomed. Much computer graphics at this time involved 2-D imagery, though increasingly as computer power improved, efforts to achieve 3-D realism became the emphasis. Initially, uses were mainly for scientific, engineering and other research purposes, but artistic experimentation began to make its appearance by the mid-1960s – most notably by Dr. By the mid-1970s, many such efforts were beginning to enter into public media. The University of Utah. Dept. Watkins The history of computer animation began as early as the 1940s and 1950s, when people began to experiment with computer graphics – most notably by John Whitney. Steganography that were present. The overall size of the cover object also Steganography (STEG-ə-NOG-rə-fee) is the practice of representing information within another message or physical object, in such a manner that the presence of the concealed information would not be evident to an unsuspecting person's examination. In computing/electronic contexts, a computer file, message, image, or video is concealed within another file, message, image, or video. For example, the hidden message may be in invisible ink between the visible lines of a private letter. Some implementations of steganography that lack a formal shared secret are forms of security through obscurity, while key-dependent steganographic schemes try to adhere to Kerckhoffs. The size of the message that is being hidden is a factor in how difficult it is

to detect. Generally, the hidden messages appear to be (or to be part of) something else: images, articles, shopping lists, or some other cover text 2a37c9f855
