Spider They are the largest order of arachnids and rank seventh in total species diversity among all orders of organisms. As of June 2025, 53,034 spider species in 136 families have been recorded by taxonomists. Spiders are found worldwide on every continent except Antarctica, and have become established in nearly every land habitat. However, there has been debate among scientists about how families should be classified, with over 20 different classifications proposed since 1900. pressure in the third or fourth pair of legs. Although larger spiders use hydraulics to straighten their legs, unlike smaller jumping spiders they depend on Spiders (order Araneae) are air-breathing arthropods that have eight limbs, chelicerae with fangs generally able to inject venom, and spinnerets that extrude silk 173e74e8ab

North Atlantic Aerosols and Marine Ecosystems Study Argo floats are a battery-powered instrument that uses hydraulics to control its buoyancy to descend-and-ascend in the water The North Atlantic Aerosols and Marine Ecosystems Study (NAAMES) was a five-year scientific research program that investigated aspects of phytoplankton dynamics in ocean ecosystems, and how such dynamics influence

atmospheric aerosols, clouds, and climate. and bio-optical measurements. The study focused on the sub-arctic region of the North Atlantic Ocean, which is the site of one of Earth's largest recurring phytoplankton blooms. The long history of research in this location, as well as relative ease of accessibility, made the North Atlantic an ideal location to test prevailing scientific hypotheses in an effort to better understand the role of phytoplankton aerosol emissions on Earth's energy budget 173e74e8ab
