Devised by Niklaus Wirth in the late 1960s and early 1970s, Pascal is a programming language. Originally produced by Borland Software Corporation, Embarcadero Delphi is composed of an IDE, set of standard libraries, and a Pascal-based language commonly called either Object Pascal, Delphi Pascal, or simply 'Delphi' (Embarcadero's current documentation refers to it as 'the Delphi language (Object Pascal)'). TAPAs model checker List of Model Checking Tools F. After a change in the graphic notation, the textual representation is updated immediately; but after textual modifications, the update of the graphical representation has to be manually triggered. The new TAPAs version was developed at the Dipartimento Sistemi ed Informatica of the University of Florence. Systems are described as process algebra terms that are then mapped to labeled transition systems (LTSs).

Properties can be verified by checking equivalences between concrete and abstract system descriptions or by model checking temporal formulas (expressed as μ -calculus or ACTL) over the obtained LTS. Its aim is to support teaching of process algebras. A key feature of TAPAs that makes it particularly suited for teaching is that it maintains a consistent graphical and textual representation of each system. Calzolari TAPAs is a tool for specifying and analyzing concurrent systems

DOSBox The emulated CPU speed of DOSBox is also manually adjustable by the user to accommodate the speed of the systems for which DOS programs DOSBox is a free and open-source MS-DOS emulator. Its adoption for running DOS games is relatively widespread; partially driven by its use in commercial re-releases of games. It was first released in 2002, when DOS technology was becoming obsolete. accelerate execution. It supports running programs - primarily video games - that are otherwise inaccessible since hardware for running a compatible disk operating system (DOS) is obsolete and generally unavailable today

While developing Pascal, Wirth employed a bootstrapping procedure in which each newer version of the Pascal compiler was written and compiled with its predecessor. Thus, the 'P2' compiler was written in the dialect compilable by 'P1', 'P3' in turn was written in 'P2' and so on, all the way till 'P5'. The...
