

Difference Between Solution Colloid And Suspension Bing

Since the definition of a colloid is so ambiguous, the International Union of Pure and Applied Chemistry (IUPAC) formalized a modern definition of colloids: "The term colloidal refers to a state of subdivision... The subject is a highly unusual or ironic combination of concepts, such as cosmic latte, death from laughter, etc.

Quantum dot They are a central topic in nanotechnology and materials science. The color of that light depends on the energy difference between the discrete. In the case of a semiconducting quantum dot, this process corresponds to the transition of an electron from the valence band to the conduction band. In other words Quantum dots (QDs) or semiconductor nanocrystals are semiconductor particles a few nanometres in size with optical and electronic properties that differ from those of larger particles via quantum mechanical effects. The excited electron can drop back into the valence band releasing its energy as light. When a quantum dot is illuminated by UV light, an electron in the quantum dot can be excited to a state of higher energy. light depends on the energy difference between the discrete energy levels of the quantum dot in the conduction band and the valence band. This light emission (photoluminescence) is illustrated in the figure on the right

The list contains 50,053 articles. --Cewbot (talk) 08:21, 27 August 2025 (UTC)

Wikipedia:Unusual articles article on its own (not merely a section in a less unusual article) and of decent quality, and in large meeting Wikipedia's manual of style. These articles are verifiable, valuable contributions to the encyclopedia, but are a bit odd, whimsical, or something one would not expect to find in Encyclopædia Britannica. For unusual contributions Of the over seven million articles in the English Wikipedia there are some articles that Wikipedians have identified as being somewhat unusual. We should take special care to meet the highest standards of an encyclopedia with these articles lest they make Wikipedia appear idiosyncratic. If you wish to add an article to this list, the article in question should preferably meet one or more of these criteria:

Wikipedia:WikiProject Medicine/Lists of pages/Articles Minimal-access cranial suspension Minimal-invasive airway management Minimal change disease Minimal clinically important difference Minimal incision Minimal Last updated 27 April 2025 via PagePile

Wikipedia:Language learning centre/Word list Eventually these words will all be translated into big lists in many different languages and using the words in phrase contexts as a resource. collisions collocated collocation collocational collocations colloid colloidal colloids colloquia colloquial colloquialism colloquialisms colloquially Drawing up a comprehensive list of words in English is important as a reference when learning a language as it will show the equivalent words you need to learn in the other language to achieve fluency. A big list will constantly show you what words you don't know and what you need to work on and is useful for testing yourself. You can use the list to generate your own lists in whatever language you're learning and to test yourself

Colloid from colloids by larger particle size). A colloid has a dispersed phase (the suspended particles) and a continuous phase (the medium of suspension). Some definitions specify that the particles must be dispersed in a liquid, while others extend the definition to include substances like aerosols and gels. Since A colloid is a mixture in which one substance consisting of microscopically dispersed insoluble particles is suspended throughout another substance. A colloid has a dispersed phase (the suspended particles) and a continuous phase (the medium of suspension). The term colloidal suspension refers unambiguously to the overall mixture (although a narrower sense of the word suspension is distinguished from colloids by larger particle size)

The article is something a reasonable person would not expect to find in a standard encyclopedia. total 31,110 pages

2022-12-29 via PetScan The symptoms of COVID-19 can vary but often include fever, fatigue, cough, breathing difficulties, loss of smell, and loss of taste. Symptoms may begin one to fourteen days after exposure to the virus. At least a third of people who are infected do not develop noticeable symptoms. Of those who develop symptoms noticeable enough to be

classified as patients, most (81%) develop mild to moderate symptoms (up to mild pneumonia), while 14% develop severe symptoms (dyspnea, hypoxia, or more than 50% lung involvement on imaging), and 5% develop critical symptoms (respiratory failure, shock, or multiorgan dysfunction). Older... 2f9b0a2faf
