Theory of constraints solutions. The solution as The theory of constraints (TOC) is a management paradigm that views any manageable system as being limited in achieving more of its goals by a very small number of constraints. TOC adopts the common idiom "a chain is no stronger than its weakest link". Other tools (mainly the "thinking process") also led to TOC applications in the fields of marketing and sales, and finance. There is always at least one constraint, and TOC uses a focusing process to identify the constraint and restructure the rest of the organization around it. That means that organizations and processes are vulnerable because the weakest person or part can always damage or break them, or at least adversely affect the outcome 00e89c31bf
