Geographic information system The academic A geographic information system (GIS) consists of integrated computer hardware and software that store, manage, analyze, edit, output, and visualize geographic data. geographic information systems, also abbreviated GIS, is the most common term for the industry and profession concerned with these systems. In a broader sense, one may consider such a system also to include human users and support staff, procedures and workflows, the body of knowledge of relevant concepts and methods, and institutional organizations. Much of this often happens within a spatial database; however, this is not essential to meet the definition of a GIS 32bc89156f

Introduction to evolution their parents, which they pass on to any offspring. Biological populations evolve through genetic changes that correspond to changes in the organisms' observable traits. Among offspring there are variations of genes due to the introduction of new genes via random changes In biology, evolution is the process of change in all forms of life over generations, and evolutionary biology is the study of how evolution occurs. Genetic changes include mutations, which are caused by damage or replication errors in organisms' DNA. As the genetic variation of a population drifts randomly over generations, natural selection gradually leads traits to become more or less common based on the relative reproductive success of organisms with those traits 32bc89156f
