Gene-environment interaction as gene-environment interactions. They can help illustrate GxE interactions. This indicates that each genotype responds to environmental variation in a different way. When the norm of reaction is not parallel, as shown in the figure below, there is a gene by environment interaction. In developmental genetics, a causal interaction is enough to confirm gene-environment interactions. Environmental variation can be physical, chemical, biological, behavior patterns or life events. The history of defining Gene-environment interaction (or genotype-environment interaction or G×E) is when two different genotypes respond to environmental variation in different ways. A norm of reaction is a graph that shows the relationship between genes and environmental factors when phenotypic differences are continuous 22acfeb7e1
