Thermistor The varying resistance with temperature allows these devices to be used as temperature sensors, or to control current as a function of temperature. This allows them to be used for limiting current to cold circuits, e. and feed the relative readings to control units like the ECU and to the dashboard. g. g. for inrush current protection, or for limiting current to hot circuits, e. To monitor the temperature of an incubator. Some thermistors have decreasing resistance with temperature, while other types have increasing resistance with temperature. Thermistors are also commonly A thermistor is a semiconductor type of resistor in which the resistance is strongly dependent on temperature.
