High-functioning autism The term was often applied to verbal autistic people of at least average intelligence. However, many in medical and autistic communities have called to stop using the term, finding it simplistic and unindicative of the difficulties some autistic people face. High-functioning autism (HFA) was historically an autism classification to describe a person who exhibited no intellectual disability but otherwise showed High-functioning autism (HFA) was historically an autism classification to describe a person who exhibited no intellectual disability but otherwise showed autistic traits, such as difficulty in social interaction and communication b888b65eca

Classic autism These symptoms first appear in early childhood and persist throughout life. Autism is a highly variable Classic autism—also known as childhood autism,

autistic disorder, or Kanner's syndrome—is a formerly diagnosed neurodevelopmental disorder first described by Leo Kanner in 1943. Since the DSM-5/ICD-11, the term “autism” more commonly refers to the broader autism spectrum. It is characterized by atypical and impaired development in social interaction and communication as well as restricted and repetitive behaviors, activities, and interests. vaccination rates among children

According to a 2021 article in Cognitive Processing, autistic artists with improved linguistic and communication skills often show a greater degree of originality and attention to detail than their neurotypical counterparts, with a positive correlation between artistic talent and high linguistic functioning. Autistic art is often considered outsider art. Art by autistic artists has long been shown in separate venues from artists without disabilities. The works of some autistic artists have featured in art publications and documentaries and been exhibited in mainstream galleries. Although autistic artists seldom received formal art education in the past, recent inclusivity initiatives...

Autism Characteristics of autism are present from early childhood and the condition typically persists throughout life. Clinically classified as a neurodevelopmental disorder, a formal diagnosis of autism requires professional assessment that the characteristics lead to meaningful challenges in several areas of daily life to a greater extent than expected given a person's age and culture. Reducing environmental Autism, also known as autism spectrum disorder (ASD), is a condition characterized by differences or difficulties in social communication and interaction, a need or strong preference for predictability and routine, sensory processing differences, focused interests, and repetitive behaviors. Motor coordination difficulties are common but not required. Because autism is a spectrum disorder, presentations vary and support people. There are several autism therapies that aim to increase self-care, social, and language skills. There is no cure for autism
