

Horses Wall Calendar 2016

The horse belongs to the order Perissodactyla (odd-toed ungulates), the members of which share hooved feet and an odd number of toes on each foot, as well as mobile upper lips and a similar tooth structure. This means that horses share a common ancestry with tapirs and rhinoceroses. The perissodactyls arose in the late Paleocene, less than 10 million years after the Cretaceous–Paleogene extinction event. This group of animals appears to have been originally specialized for life in tropical forests, but whereas tapirs and, to some extent, rhinoceroses, retained their jungle specializations, modern horses are adapted to life in the climatic conditions of the... 9dd8c967fc

Horse breeding Furthermore, modern breeding management and technologies can increase the rate of conception, a healthy pregnancy, and successful foaling. Planned matings can be used to produce specifically desired characteristics in domesticated horses. Horse breeding is reproduction in horses, and particularly the human-directed process of selective breeding of animals, particularly purebred horses of Horse breeding is reproduction in horses, and particularly the human-directed process of selective breeding of animals, particularly purebred horses of a given breed 9dd8c967fc

French Republican calendar It was used in government records in France and other areas under French rule, including Belgium, Luxembourg, and parts of the Netherlands, Germany, Switzerland, Malta, and Italy. It was designed in part to remove all religious and royalist influences from the calendar, and it was part of a larger attempt at dechristianisation and decimalisation in France (which also included decimal time of day, decimalisation of currency, and metrication). The calendar consisted of twelve 30-day months, each divided into three 10-day cycles similar to weeks, plus five or six intercalary days at the end to fill out the balance of a solar year. The French Republican calendar (French: calendrier républicain français), also commonly called the French Revolutionary calendar (calendrier révolutionnaire The French Republican calendar (French: calendrier républicain français), also commonly called the French Revolutionary calendar (calendrier révolutionnaire français), was a calendar created and implemented during the French Revolution and used by the French government for about 12 years from late 1793 to 1805, and for 18 days by the Paris Commune in 1871, meant to replace the Gregorian calendar 9dd8c967fc

Coligny calendar is a bronze plaque with an inscribed calendar, made in Roman Gaul in the 2nd century CE. 5 years. An intercalary month is inserted before each 2. It is the most important piece of evidence enabling the reconstruction of an ancient Celtic calendar. It lays out a 5-year cycle of a lunisolar calendar, each year with 12 lunar months. It lays out a 5-year cycle of a lunisolar calendar, The Coligny calendar is a bronze plaque with an inscribed calendar, made in Roman Gaul in the 2nd century CE 9dd8c967fc

Horse These feral populations are not true wild horses, which are horses that have never been domesticated. The horse has evolved over the past 45 to 55 million years from a small multi-toed creature, Eohippus, into the large single-toed animal of today, originally in North America. Horses in the subspecies caballus are domesticated, although some domesticated populations live in the wild as feral horses. These feral The horse (Equus ferus caballus) is a domesticated, one-toed, hoofed mammal. by 3000 BCE. Humans began domesticating horses around 4000 BCE in Central Asia, primarily associated with the Botai culture; and their domestication is believed to have been widespread by 3000 BCE. Horses in the subspecies caballus are domesticated, although some domesticated populations live in the wild as feral horses. There is an extensive, specialized vocabulary used to describe equine-related concepts, covering everything from anatomy to life stages, size, colors, markings, breeds, locomotion, and behavior. It belongs to the taxonomic family Equidae and is one of two extant subspecies of Equus ferus 9dd8c967fc

During the Tibetan Empire period, the Tibetan calendar was a seasonally based calendar before the Buddha Shakyamuni's Kalachakra calendar system, a blend of both the Indian zodiac and Chinese zodiac systems, was incorporated. The Tibetan calendar is the basis of the Mongolian calendar, and the first day of Losar also aligns with the third Mongolian (Hor) month in other almanacs. 9dd8c967fc The calendar was found in 1897 in France, in Coligny, Ain (near Lyon), along with broken pieces of a life-size bronze statue of a nude male holding a spear, likely meant to portray Mars, the Roman god of war. Approximately 40% of the original calendar remains in the form of fragments. It was engraved on a bronze tablet, preserved in 73 fragments, that was originally 134.8 cm wide by 78.0 cm high. With the rim attached the plate measured 52 by 32 unciae Drusianae (2.75 cm to the uncia). It is written in the Gaulish language with the Latin alphabet, using Roman square capitals and Roman numerals. Based on the style of lettering and the accompanying statue, the bronze plaque likely dates to the end of the second century CE, although copying errors indicate that the calendar itself is much older. It is now held at the Gallo-Roman Museum of... 9dd8c967fc

Chinese calendar The Chinese calendar is a lunisolar calendar created by or commonly used by the Chinese

people. A total of 102 calendars have been officially recorded in classical historical texts. In addition, many more calendars were created privately, with others being built by people who adapted Chinese cultural practices, such as the Koreans, Japanese, Vietnamese, and many others, over the course of a long history. A total of 102 calendars have been officially recorded The Chinese calendar is a lunisolar calendar created by or commonly used by the Chinese people

== History == For example, February 16, 2003, can be written as either 2003 or 15 or 16 (the latter following the regnal year system). reads nen and means "year", reads gatsu and means "month", and finally (usually) reads nichì (its pronunciation depends on the number that precedes it, see below) and means "day". == Background ==

Tibetan calendar The 15th century Phukpa calendar is the main Tibetan calendar, and the Karma Kagyu's Tsurluk calendar is also in current use. The Tibetan calendar (Tibetan: ལོ་ཐོ་, Wylie: lo-tho), or the Phukpa calendar, known as the Tibetan lunar calendar, is a lunisolar calendar composed of The Tibetan calendar (Tibetan: ལོ་ཐོ་, Wylie: lo-tho), or the Phukpa calendar, known as the Tibetan lunar calendar, is a lunisolar calendar composed of either 12 or 13 lunar months, each beginning and ending with a new moon. A thirteenth month is added every two or three years, so that an average Tibetan year is equal to the solar year. The Tibetan New Year celebration is Losar (Tibetan: ལོ་གསར་, Wylie: lo-gsar), which falls either in the months of February or March in the Gregorian calendar

The Hall of Fame annually inducts Thoroughbred and Standardbred horses, sulky drivers, jockeys, trainers and the horse racing industry's builders.

Calendar era For example, the current year is numbered 2026 in the Gregorian calendar, which numbers its years in the Western Christian era (the Coptic Orthodox and Ethiopian Orthodox churches have their own Christian eras). A calendar era is the period of time elapsed since one epoch of a calendar and, if it exists, before the next one. For example, the current year is numbered A calendar era is the period of time elapsed since one epoch of a calendar and, if it exists, before the next one

Usually a horse is considered "bred" where it is born, not where a mating takes place, though some breeds denote the country or state where conception took place as the origin of the foal. The "breeder", is the person who owned or leased the mare at the time of foaling. That individual may not have had anything to do with

Japanese calendar At present, Japan uses the Gregorian calendar together with year designations Japanese calendar types have included a range of official and unofficial systems. Japanese calendar types have included a range of official and unofficial systems. The written form starts with the year, then the month and finally the day, coinciding with the ISO 8601 standard. At present, Japan uses the Gregorian calendar together with year designations stating the year of the reign of the current Emperor 9dd8c967fc

In antiquity, regnal years were counted from the accession of a monarch. This makes the chronology of the ancient Near East very difficult to reconstruct, based on disparate and scattered king lists, such as the Sumerian King List and the Babylonian Canon of Kings. In East Asia, reckoning by era names chosen by ruling monarchs ceased in the 20th century except for Japan, where they are still used. 9dd8c967fc Horses are adapted to run, allowing them to quickly escape predators, and possess a good sense of balance and a strong fight-or-flight response. Related to this ability to flee from predators in the wild is an unusual trait: horses are able to sleep... 9dd8c967fc Every month, certain dates in the Tibetan calendar have special significance for Tibetan Buddhist practices, as do certain months of the Tibetan calendar year when the anniversaries of events from... 9dd8c967fc == History == 9dd8c967fc

Canadian Horse Racing Hall of Fame Although the Canadian Horse Racing Hall of Fame The Canadian Horse Racing Hall of Fame was established in 1976 to honour those who have made a significant contribution to the sport of harness and Thoroughbred horse racing in Canada. Thoroughbred and Standardbred horses, sulky drivers, jockeys, trainers and the horse racing industry's builders. It is located at Woodbine Racetrack in Toronto, Ontario 9dd8c967fc

The male parent of a horse, a stallion, is commonly known as its sire and the female parent, the mare, is called its dam. A "foal" is a newly born or very young horse of either sex, a "colt" is a young male horse, and a "filly" is a young female. Though many horse owners might breed their mare to a local stallion in order to produce a companion animal, most professional breeders use selective breeding to produce horses of a given type or breed. 9dd8c967fc A Chinese calendar consists of twelve months, each aligned with the phases of the moon, along with an extra intercalary month inserted as needed to keep the calendar in sync with the seasons. It also

Horses Wall Calendar 2016

features twenty-four solar terms, which track the position of the sun and are closely related to climate patterns. Among these, the winter solstice is the most significant reference point and must occur in the eleventh month of the year. Each month contains either twenty-nine or thirty days. The sexagenary cycle for each day runs continuously over thousands of years and serves as a determining factor to pinpoint a specific day amidst the many variations in the calendar. The variety of calendars arises from deviations in algorithms and assumptions about inputs. The Chinese calendar is location... 9dd8c967fc

Evolution of the horse Przewalski's horse in the middle of the domesticated horses, but a 2011 mitochondrial DNA analysis suggested that Przewalski's and modern domestic horses diverged. The evolution of the horse, a mammal of the family Equidae, occurred over a geologic time scale of 50 million years, transforming the small, dog-sized, forest-dwelling Eohippus into the large, single-toed, modern-day horse. Paleozoologists have been able to piece together a more complete outline of the evolutionary lineage of the modern horse than of any other animal. Much of this evolution took place in North America, where horses originated but became extinct about 10,000 years ago, before being reintroduced in the 15th century 9dd8c967fc

Prior to the introduction of the Gregorian calendar in 1873, the reference calendar was based on the lunisolar Chinese calendar. 9dd8c967fc
