X is a random variable. The term reliability function is common in engineering while the term survival function is used in a broader range of applications, including human mortality. The survival function is the complementary cumulative distribution function of the lifetime. Sometimes complementary cumulative distribution functions are called survival functions in general. $F(t) = 1 - S(t)$
$$X$$
 The survival function is also known as the survivor function or reliability function. F is the probability density function... $f(x)$
