Mathematics and art have a long historical relationship. Artists have used mathematics since the 4th century BC when the Greek sculptor Polykleitos wrote his Canon, prescribing proportions conjectured to have been based on the ratio $1:\sqrt{2}$ for the ideal male nude. Persistent popular claims have been made for the use of the golden ratio in ancient art and architecture, without reliable evidence. In the Italian Renaissance, Luca Pacioli wrote the influential treatise *De divina proportione* (1509), illustrated...

Java concurrency Objects and resources can be accessed by many separate threads. The Java programming language and the Java virtual machine (JVM) are designed to support concurrent programming. Thread synchronization ensures that objects are modified by only one thread at a time and prevents threads from accessing partially updated objects during modification by another thread. The programmer must ensure read and write access to objects is properly coordinated (or "synchronized") between threads. All execution takes place in the context of threads. The Java language has built-in constructs to support this coordination. All execution takes place in the context. The Java programming language and the Java virtual machine (JVM) are designed to support concurrent programming. Each thread has its own path of execution, but can potentially access any object in the program.

Together with religion and other cultural universals of contemporary human societies, the emergence of figurative art is a necessary attribute of full behavioral modernity. Many of the best known events in Indonesian history took place on Java. It was the centre of powerful Hindu-Buddhist empires, the Islamic sultanates, and the core of the colonial Dutch East Indies. Java was also the center of the Indonesian struggle for independence during the 1930s and 1940s.
