68b164b307 (real-number 3D space) are called triple integrals.
For repeated antidifferentiation of a single-variable function, see
the Cauchy formula... 68b164b307

Philosophy of science Philosophy of science focuses on
metaphysical, epistemic and semantic aspects of scientific
practice, and overlaps with metaphysics, ontology, logic, and
epistemology, for example, when it explores the relationship
between science and the concept of truth. Philosophy of science
is both a theoretical and empirical discipline, relying on
philosophical theorising as well as meta-studies of scientific
practice. Amongst its central questions are the difference
between science and non-science, the reliability of scientific
theories, and the ultimate purpose and meaning of science as a
human endeavour. Educational Perspective, 5th, 315 Outhwaite,
William, 1988 Habermas: Key Contemporary Thinkers, Polity
Press (Second Edition 2009), ISBN 978-0-7456-4328-1 Philosophy
of science is the branch of philosophy concerned with the
foundations, methods, and implications of science. Ethical issues
such as bioethics and scientific misconduct are often considered

Originally called infinitesimal calculus or "the calculus of infinitesimals", it has two major branches, differential calculus and integral calculus. The former concerns instantaneous rates of change, and the slopes of curves, while the latter concerns accumulation of quantities, and areas under or between curves. These two branches are related to each other by the fundamental

theorem of calculus. They make use of the fundamental notions of convergence of infinite sequences and infinite series to a well-defined limit. It is the "mathematical backbone" for dealing with problems where variables change with time or another...
