Cirrhosis "What Is Fetor Cirrhosis, also known as liver cirrhosis or hepatic cirrhosis, chronic liver failure or chronic hepatic failure and end-stage liver disease, is a chronic condition of the liver in which the normal functioning tissue, or parenchyma, is replaced with scar tissue (fibrosis) and regenerative nodules as a result of chronic liver disease. Handbook of Liver Disease, 4e. S2CID 203813520. Over time, scar tissue and nodules of regenerating hepatocytes can replace the parenchyma, causing increased resistance to blood flow in the liver's capillaries—the hepatic sinusoids—and consequently portal hypertension, as well as impairment in other aspects of liver function. Friedman L (2018). ISBN 978-0-323-47874-8. 47672. ISSN 1687-8353. Elsevier. Brennan D. Damage to the liver leads to repair of liver tissue and subsequent formation of scar tissue f50b939dee
