

Multivariate Analysis Of Ecological Data Using Canoco 5

Canonical correspondence analysis CCA is commonly used in ecology in order to extract gradients that drive the composition of ecological communities. In multivariate analysis, canonical correspondence analysis (CCA) is an ordination technique that determines axes from the response data as a unimodal combination of measured predictors. CCA extends correspondence analysis (CA) with regression, in order to incorporate predictor variables

Phytosociology In phyto-sociology, such a unit is known as a phytocoenosis (or phytocoenose). A phytocoenosis is more commonly known as a plant community, and consists of the sum of all plants in a given area. Power, Ithaca, NY Oksanen, J. A specific community of plants is considered a social unit, the product of definite conditions, present and past, and can exist only when such conditions are met. Phytosociology aims to empirically describe the vegetative environment of a given territory. Archived from the Phytosociology, also known as phytocoenology or simply plant sociology, is the study of groups of species of plant that are usually found together. More strictly speaking, a phytocoenosis is a set of plants in area that are interacting with each other through competition. (2010) (March 11, 2010). It is a subset of a biocoenosis, which consists of all organisms in a given area. "Multivariate Analysis of Ecological Communities in R: vegan tutorial" (PDF)
