Women in engineering in the United States engineering. Numerous explanations and points of view have been offered to explain women's participation rates in this field. Furthermore, female engineers that were employed were less likely to have obtained Historically, women in the United States have been represented at lower rates than men in both science and engineering college programs and careers. These explanations include beliefs regarding women's lack of interest in science and engineering, their physiological. Over time, this pattern has led to a significantly higher concentration of male professional engineers compared to women. Some Feminist theorists suggest that these social and historical factors have perpetuated women's low participation rates in engineering over time. Additionally, this disparity has led to careers in Education, History, English, Humanities and the like to be seen as "feminine" careers and areas of study. In 1960, however, less than 1% of recorded engineers were women a138ab5c7e
